SUBSTANDARD HOUSING AND HEALTH

Substandard housing conditions pose an acute risk to young children, seniors, and people with chronic illnesses.^{1,2,3} Nationwide, more than 23 million people have asthma; it is the most common chronic ailment among children in the United States.^{4,5} By one estimate, 39% of asthma cases in children under 6 can be traced to residential exposure to indoor air hazards.⁶ Housing-related injuries result in roughly 4 million emergency room visits and 70,000 hospital admissions.⁷ Nationwide, in 2000, there were an estimated 1.8 million falls leading to emergency room visits among those age 65 and older; the majority of falls take place within the home.⁸ Exposure to lead paint chips and related dust are the leading cause of elevated lead levels in children in the U.S.⁹

LOCALITIES: TOWNS, CITIES, COUNTIES AND OTHER FORMS OF LOCAL GOVERNMENT

Throughout this document, the term “localities” refers to towns, cities, counties, and other forms of local government. State and local law will determine which local governmental body governs relevant code enforcement activities.

INTRODUCTION

Substandard conditions in the home are responsible for a wide array of significant health problems, such as childhood lead poisoning; exacerbated asthma and respiratory conditions that result from exposure to mold, pests, and other household allergens; and increased rates of injury and mortality among the elderly. As rental housing is more likely to be substandard than owner-occupied housing, tenants are at higher-than-average risk. Local governments can play a critical role in improving resident health by implementing programs to improve the quality of their housing stock.

Most localities maintain code enforcement programs to ensure the safety and welfare of their citizens. Traditionally, these programs have been complaint-based; that is, in response to a resident complaint about a substandard housing condition, a municipal code enforcement officer will conduct a housing inspection and, if the complaint is substantiated, the officer will begin enforcement proceedings.

Proactive rental inspection (PRI) programs are different. Under a PRI program, most covered rental units are inspected on a periodic basis to ensure that they are safe and habitable, and that property values are maintained. Typically, inspections take place at designated intervals, though they may also be triggered by an event, such as a change in tenancy. While the hallmark of proactive rental inspection programs is that inspections are not complaint-based, localities with proactive rental inspection programs generally conduct complaint-based inspections too.

This guide:

1. describes the advantages of proactive rental inspection programs;
2. details the components of PRI programs and provides an overview of options for program design;
3. examines challenges that may arise in implementing PRI; and
4. suggests broader strategies for success when adopting a PRI program.

PRI BY ANY OTHER NAME...

Proactive rental inspection (PRI) programs may go by any number of names. For example, they may be referred to as “systematic code enforcement,” “periodic code enforcement,” “rental housing inspection,” or “rental registration and licensing.” It is the regular, mandatory nature of inspections that differentiates these types of programs from complaint-based rental housing inspection programs.

REDUCING COMPLAINT-BASED INSPECTIONS

According to the author of a study examining North Carolina proactive rental inspection programs, “[t]he number of complaints a city receives about substandard housing is an important measure of program effectiveness. If inspections programs result in code compliance, a city should receive fewer complaints. Greensboro’s program began in 2004 . . . after a high of 1,427 housing complaints in 2005, the number of complaints fell by 61 percent to 871 in 2007.”¹⁰ In the city of Asheville (which was also included in the study), the number of complaints between 2001 and 2003 fell from 227 to 60.¹¹ After the program was discontinued, the number of complaints increased again, reaching 189 in 2007.¹²

ADVANTAGES OF PROACTIVE RENTAL INSPECTION (PRI) PROGRAMS

In many instances, PRI programs may be more effective than complaint-based programs in ensuring safe and healthy housing, preserving housing stock, protecting vulnerable tenants, and maintaining neighborhood property values.

PRI Programs Preserve Safe and Healthy Rental Housing

By relieving tenants of the burden of having to force reticent landlords to make needed repairs, systematic inspections can help ensure that a locality’s rental housing stock is maintained and that residents live in healthy conditions.

Between the establishment of Los Angeles’s Systematic Code Enforcement Program (SCEP) in 1998 and 2005, “more than 90 percent of the city’s multifamily housing stock [was] inspected and more than one and half million habitability violations [were] corrected. The result [was] an estimated \$1.3 billion re-investment by owners in the city’s existing housing stock.”¹³

For example, between 2008 and 2013, under Sacramento’s Rental Housing Inspection Program, housing and dangerous building cases were reduced by 22 percent.¹⁴

According to a study of PRI programs in five North Carolina cities, the City of Greensboro alone brought more than 8,700 rental properties up to minimum standards in four years under its proactive rental inspection program (RUCO).^{15, 16, 17}

In addition, by ensuring that landlords are aware of poor conditions before they worsen, systematic code enforcement encourages preventative maintenance, which is more cost effective than deferred maintenance, and thereby helps landlords to maintain their properties.¹⁸

PRI Programs Help Protect the Most Vulnerable Tenants

Often, the most vulnerable tenants don’t complain.^{19, 20, 21, 22} Some tenants are unaware that they have a right to safe and habitable housing. They may not know about existing tenant protections or code enforcement programs. Or they may have language barriers or disabilities that make it difficult to navigate the code enforcement system. Many tenants may be afraid to complain about their housing for fear of increased rent or landlord retaliation (such as eviction). Residents may be undocumented or have limited income that hampers their ability to move.

As a result of these barriers, the housing inhabited by the most vulnerable populations, which is frequently the worst housing, is often the most likely to fall through the cracks of a complaint-based code enforcement system. In 2009, Linda Argo, the Director of the Department of Consumer and Regulatory Affairs (DCRA) for the District of Columbia, testified before the D.C. City Council about the need for their proactive rental inspection

PROTECTING TENANTS FROM RETALIATORY ACTIONS

Most states have laws that protect tenants from landlord retaliation when they submit complaints regarding housing safety. California law, for example, prohibits a landlord from retaliating against a tenant for complaining to an appropriate agency about the habitability of a rental unit.²³ The law prohibits retaliatory rent increases, service decreases, eviction, or threats of such.²⁴ In some states, localities include protections within their local laws.

However, even when tenants have legal protections, they may be hindered from asserting these protections due to limited resources and insufficient availability of affordable or free legal services for low-income tenants.²⁵

Proactive PRI programs may help to reduce tenant fear of landlord retaliation, as well as actual retaliation, since the inspections and compliance actions are prompted by a municipal program rather than by tenant complaints.

program. She explained, “[i]t’s quite clear that a complaint-based system is no longer sufficient if we want to maintain safe housing conditions for all residents, especially our most vulnerable - the poor, the elderly, the non-English speakers.”²⁶ She noted that “[f]or the vast majority of properties named in the slumlord lawsuits [initiated by the Attorney General], DCRA had not received any recent complaints from residents of those buildings. And for the worst of the properties, we never received a single complaint.”²⁷

PRI Programs May Preserve Neighborhood Property Values (and a Locality’s Property Tax Base)

One of the lessons localities have drawn from the foreclosure crisis is that it is crucial to prevent concentration of blighted properties, in part because poorly maintained, substandard housing can have a negative effect on neighboring property values. By addressing housing conditions proactively, and by quickly identifying and targeting exterior substandard conditions alongside interior code violations, proactive rental inspection programs can ensure that properties don’t become blighted, thereby preserving property values. From a financial standpoint, this benefits landlords and homeowners. Maintaining neighborhood property values also benefits the entire locality because it preserves the local tax base.

STATE LAW, PREEMPTION AND PROACTIVE RENTAL INSPECTIONS

Code enforcement is an exercise of a government's "police power." Police power is the inherent power of government to act to protect the health, safety, and welfare of its citizens. The extent of the police power that a locality may exercise is dependent on its state constitutional or statutory law.

In a few states, the law may establish that code enforcement is administered by the state.²⁸ In most states, however, code enforcement occurs at the city or county level. In some states, state law expressly authorizes localities to establish a code enforcement program. In other states, the state constitution or state law may give localities broad "home rule" power - the authority to enact laws, such as a proactive rental inspection program - without a specific delegation of power from the legislature.

State legislatures can also preempt the authority of localities to enact proactive rental inspection programs by enacting state laws that override or limit a locality's authority to establish a program. Some states, including Arizona, Georgia, North Carolina, and Tennessee, prohibit or significantly restrict systematic interior inspections of rental units.²⁹ Greensboro, North Carolina had a successful proactive rental inspection program until the legislature preempted the city's authority to operate that program.^{30, 31}

It is important to review your state law to determine if the authority to start a PRI program resides with your locality or with your state.

UNDERSTANDING PRI PROGRAMS

There is no standard PRI program. Programs vary according to the types of rental housing in a locality, the needs of the particular locality, the availability of resources, and (to an extent) state law. This guide provides an overview of the key components of PRI programs and the different ways localities have implemented them.

Though details vary, PRI programs typically share a basic program structure:

- **Registration.** The locality requires property owners to register their rental properties or to obtain a certificate or license in order to rent housing units.
- **Periodic Inspections.** The locality requires periodic inspections of all covered rental properties. Inspections occur on a periodic basis, usually every few years, to ensure that the housing is adequately maintained.
- **Enforcement.** If a property fails inspection, the locality initiates enforcement measures.

✓ Practice Tip

Phasing in the initial inspections over time or targeting particular neighborhoods can help to ease the transition from a complaint-based program to a systematic one.³²

PHASING IN PRI PROGRAMS

A PRI program requires a substantial initial investment of time and resources. An early audit of Los Angeles' program found that the goal of inspecting every multi-unit rental property every three years was not achievable at first because of backlogs and the length of time inspections took. The auditor recommended several strategies, including inspecting the oldest properties first, conducting initial drive-by exterior reviews, focusing on properties with histories of complaints and/or non-compliant owners/tenants, and establishing staggered review schedules from three to five or more years based on selected criteria (e.g., rent, location, history).³³

Types of Rental Housing Included Within the Program

A locality must also decide on the types of rental housing to include in its program. The types of housing included are usually determined by the most pressing needs in the community and by the availability of resources for inspection and enforcement.

Targeting Particular Neighborhoods

Some localities, particularly when first initiating a rental housing inspection program, target particular neighborhoods or areas. This can enable a locality to focus limited resources where they are most needed.

Sacramento, for example, piloted a rental housing inspection program by targeting two neighborhoods, each of which contained a large number of rental properties with a high incidence of dangerous building cases, code enforcement cases, and police and fire calls for service.³⁴ The program was successful and, in 2008, Sacramento expanded the program citywide.³⁵

Similarly, Kansas City, MO expanded its program incrementally, implementing the program initially in areas where 30 percent or more of the housing units were rentals, the housing inventory was basically sound but exhibited substantial deterioration, and neighborhood residents had expressed interest in a systematic housing inspection program.³⁶

Beginning in 1986, St. Louis required a certificate of inspection with each change in tenancy in certain housing conservation districts.^{37, 38} This policy was expanded to cover the entire city in 2012 because it had proven successful in sustaining and improving the quality of residential housing, and city officials determined that it could be helpful in enforcing minimum housing standards and securing the health and safety of all St. Louis residents.³⁹

Targeting Properties Based on Number of Units

Localities often limit a program’s scope to properties that contain a specified minimum number of units.

LOCALITY	Rental Properties Covered by PRI, By # of Units on the Property
Seattle, WA	1 or more units
Los Angeles, CA	2 or more units
Washington, DC	3 or more units
San Francisco, CA (exterior inspection)	3 or more units (and hotels with 6 or more units)
Grand Rapids, MI	1 or more units
Santa Cruz, CA	1 or more units

Multi-unit properties: Most programs cover multi-unit rental properties, but some programs restrict that coverage to properties with a certain number of units. Los Angeles’s Systematic Code Enforcement Program applies to residential properties with two or more units, so long as at least one of those units is rented or offered for rent.⁴⁴ Washington DC’s proactive inspection program applies to all multi-family rental properties with more than three units.⁴⁵ San Francisco conducts periodic inspections of the exterior and common areas of residential buildings with three or more dwelling units and hotels consisting of six or more guest rooms.⁴⁶ In contrast, Seattle’s registration and inspection provisions apply to rental housing properties irrespective of size or number of units.⁴⁷

Single-family homes: Some PRI programs cover single-family homes. Recently, Grand Rapids expanded its registration and inspection program for multi-family properties to include single-family rental housing and abandoned and vacant residential properties.⁴⁸ Reporting that the number of families living in single-family rental units increased from 4,568 to 7,771 between 2006 and 2009, the working group recommended adding single-family rental units in order to: (1) ensure that substandard housing did not disproportionately impact families with children; (2) increase market equity for all investment property owners by promoting consistent code compliance across all types of rental housing; and (3) ensure a standard of quality and affordability for all rental units, particularly in the central city, to promote urban neighborhoods.⁴⁹ Santa Cruz, a college town where single-family homes are often rented to groups of students, also includes single-family rental homes within its program.⁵⁰

Other Commonly-Exempted Units

Localities have also adopted a variety of other ways to focus their rental inspection resources.

Owner-occupied: Several localities exempt buildings if the property owner lives in one of the units.⁵¹ Boston, for example, exempts buildings of six or fewer units if the owner occupies one of the units.⁵² The rationale for this exemption is that buildings where the landowner resides are likely to be adequately maintained.

 **Practice Tip**

When targeting neighborhoods, a locality should use criteria that pertain to the quality of housing and/or the need for inspection, such as those criteria employed by Sacramento and Kansas City, MO, as described above. Classifications or targeting based on the race, color, religion, sex, familial status, national origin, or disability status of residents may result in discrimination claims.^{40, 41, 42, 43}

VACANT PROPERTY REGISTRATION

Some localities, such as Grand Rapids, require owners to register all rental property - including vacant and abandoned properties.⁵³ Requiring the registration of vacant and abandoned property can help prevent blight in neighborhoods, especially in localities with high foreclosure or vacancy rates.

Government regulated or subsidized: Many localities, including Boston and Seattle, exempt federal, state, or locality-owned or managed buildings, as well as Section Eight and other subsidized housing, because these housing categories are subject to other inspection requirements.⁵⁴ Should the frequency of these other mandated inspections be reduced,^{55, 56} it may be advisable to extend municipal rental inspection programs to cover these properties.

New-construction: Some localities exempt newly-built housing, as it is presumed to be in good condition. In Santa Cruz, for example, housing built within the preceding five years is exempt from the inspection program.⁵⁷

Hotels and motels: Non-residential hotels, motels, and other transient housing are also commonly exempted from rental housing inspection ordinances.^{58, 59} However, given that vulnerable tenants may live in these types of properties on a long-term basis, it may be important to include them in municipal periodic rental inspection programs if no other standards are applied to ensure that they remain in habitable condition.

Registration and Licensing of Rental Property

Rental Registration

In order to implement a PRI program, a locality needs to know what rental properties exist and who owns them.⁶⁰ To determine this, many localities require owners to register their rental properties or units.

Registration requirements are common in systematic rental housing inspection programs, but can also be implemented independently, or in conjunction with other city administrative functions such as business licensing.

In addition to informing a locality of the location of rental housing, information gathered during registration may help a locality to inventory its rental housing stock, which can be valuable for planning purposes. For example, registration and licensing can allow municipal housing, commerce, and planning agencies to monitor fluctuations in the number of rental units over time, which may help them plan for growth or reduction, or manage situations like the foreclosure crisis.

Frequency of renewal: Localities vary in how frequently they require registration renewal. For example, Kansas City, MO requires annual registration.⁶¹ Some localities require registration to be updated when there is a change in ownership, in addition to or in place of renewal on a fixed term basis.

Registration fees: Many localities charge fees for property registration (detailed in a later section). Some localities do not charge a fee, but a failure to register may result in significant enforcement fees.⁶²

Rental Licensing

In lieu of a registration requirement, some localities require property owners to obtain a license before renting a housing unit. To ensure the habitability of rental units prior to tenant occupancy, localities may require an inspection as a prerequisite to a license.

 **Practice Tip**

In the PRI context, the terms license and registration may be used interchangeably from one locality to the next. Sometimes municipal rental housing registration requirements are standalone - not tied to additional regulatory schemes - and primarily serve the purpose of allowing a locality to index and gather information about its rental properties. In other instances, municipal rental housing registration requirements are the same as license requirements and are part of a locality's rental housing inspection program. Some municipal PRI programs use the term "certificate of compliance" or "certificate of occupancy" in lieu of the term "license."

Therefore, it is important to look beyond PRI program titles and terminology to understand the actual design and function of a program.

Examples of communities that use a licensing approach are Boulder, CO and Baltimore County, MD.⁶³

Ann Arbor prohibits occupancy of a dwelling unless it has a valid certificate of compliance. After a property has been inspected and is determined to be in conformance with the code, the property owner is responsible for applying for the certificate of compliance.⁶⁴ Ann Arbor also has provisions for the issuance of a temporary certificate of compliance if, due to inspection service scheduling difficulties, an inspection cannot be conducted prior to the expiration of a current certificate.⁶⁵

In Washington, D.C., to obtain a license to operate a housing business, an owner must allow an inspection of the property to determine that it is in compliance with all applicable building and housing laws and regulations.⁶⁶

Similarly, Boulder utilizes a licensing scheme to ensure compliance with the city's property maintenance code prior to occupancy.⁶⁷ Boulder has provided that in cases where an inspection uncovers deficiencies that cannot be corrected prior to occupancy, the owner or operator may apply for a temporary license, which is issued for a limited time if the number and severity of violations does not constitute an imminent health and safety hazard to the public or to occupants.⁶⁸

Frequency of Periodic Inspections

Whether in conjunction with a registration system or a licensing requirement, the defining characteristic of PRI programs is routine inspection of rental housing. As described above, some localities require an inspection as a prerequisite to initial registration, licensing, or occupancy. Many PRI programs also require additional periodic inspections. The frequency with which localities elect to conduct these inspections is often heavily dependent on the extent of a locality's resources. In addition to periodic inspections, certain events may trigger, accelerate, or decelerate inspections.

LOCALITY	FREQUENCY OF INSPECTION
Los Angeles, CA	Every 3 years
Baltimore County, MD	Every 3 years
Boulder, CO	At registration. At renewal of license, which is required every 4 years. Upon transfer of ownership.
Ann Arbor, MI	Not more than 2.5 years
Kansas City, MO	Every 2 to 4 years, depending on compliance
Grand Rapids, MI	Every 2, 4 or 6 years, depending on compliance
Boston, MA	Every 5 years for most properties. Rental units belonging to chronic offender landlords inspected every three years. Problem properties inspected annually.

 **Practice Tip**

While a systematic rental housing inspection program may require inspections on a fixed cycle, the actual timeline on which municipal inspectors are able to work their way through inspections of covered housing may, in some cases, be longer.⁶⁹

Periodic Inspections on a Fixed Basis

Many PRI programs require inspections on a cyclical basis, usually every few years. Baltimore County and Los Angeles require an inspection every three years.⁷⁰ Boulder requires an inspection at registration, upon renewal of a rental license - generally every four years - or upon transfer of ownership.⁷¹ Ann Arbor specifies that the period between inspections shall be no longer than 2.5 years.⁷²

Inspection Frequency Based on Prior Compliance

A number of localities set a baseline standard for the frequency of inspections and then allow for deviation from that standard based on a property's record of compliance. Several localities require less frequent inspections once a property owner establishes a record of compliance. In Kansas City, MO, for example, certificates of compliance are valid for two years; however, owners may be issued certificates for up to four years if there have been no violations since the last date of certification.⁷³

Grand Rapids conducts inspections when owners apply for a certificate of compliance, which is a prerequisite for occupancy.⁷⁴ The certificate is valid for two, four, or six years, depending on the record of compliance, the presence or absence of violations, and the degree of compliance with the program's registration and fee requirements.⁷⁵ Grand Rapids will issue a six-year certificate if: the property has no violations and has not changed ownership since its last certification; the owner applies for an inspection and re-registers the property on time; and there are no outstanding fees, taxes, or assessments against the property.⁷⁶ A four-year certificate is issued if the owner applies for an inspection and re-registers the property on time, and the property is brought into compliance with the code prior to expiration of the current certificate or within the timeframe specified on any notice of violation.⁷⁷ In other cases, Grand Rapids will issue a two-year certificate.⁷⁸

Boston requires that properties covered by its program are inspected at least once every five years, but it also has mechanisms to target bad actors and problem properties for more frequent inspection.⁷⁹ For example, in Boston, owners of problem properties - those which have received four or more sustained complaints for noise; or complaints for noxious, noisome, or unsanitary conditions; or police calls for arrestable offenses - must annually request an inspection from the city, and develop a management plan to remediate the property's persistent substandard conditions.⁸⁰ Additionally, Boston operates a chronic offender point system which tracks violations and assigns them a point value. Owners who have accrued a certain number of points are classified as chronic offenders and must request an inspection of each rental unit once every three years.⁸¹

Self-Certification

A number of localities allow property owners to "graduate" into self-certification programs if they have established a record of passing inspections with no violations. Self-certification programs can give localities a way to allocate their limited resources to properties most in need of inspections. It can also serve as an incentive for property owners to ensure that their property complies with all applicable codes.

For example, in Sacramento, all rental housing properties are subject to routine periodic inspection by the city.⁸⁴ Rental housing property may be placed in the self-certification program if: (1) the inspector has found no violations, or all violations identified in the initial inspection were abated within 30 days; (2) the property owner and local contact representative are in compliance with all of the provisions in the housing code; and (3) the property owner is not delinquent on any payments to the city of fees, penalties, or taxes.⁸⁵ Under Sacramento's self-certification program, property owners are responsible - annually and upon a change in tenancy - for inspecting their housing units, making repairs necessary to comply with the housing code, completing a self-certification form for each unit, and providing a copy of this form to the occupants of the respective units.⁸⁶ Rental units included within the self-certification program are still subject to random inspections.⁸⁷ Properties in the program receive a discount on the Rental Inspection Housing Program fee.⁸⁸

Rental property owners in Santa Cruz can request to participate in the self-certification program if the property is well-maintained and has had no code violations in the preceding three years.⁸⁹ In order to remain in the program, owners must annually self-certify each residential dwelling unit and pay an annual self-certification fee.⁹⁰ While the city will generally inspect other units annually,⁹¹ participants in the self-certification program are subject to a reduced inspection cycle: twenty percent of the units on each property (or at least one unit on smaller properties) are inspected not more than once every five years, so long as the property does not deteriorate to the point of no longer meeting eligibility standards for the self-certification program.⁹²

Practice Tip

Programs that only conduct inspections during vacancies will overlook units in poor shape, fail to discover conditions that residents might point out, and offer little protection to long-term tenants. In addition, because there is no tenant to verify that needed repairs are made, the locality may need to spend additional resources checking to make sure that property owners comply with repair orders, or repairs may not even be made.

Boston's program originally provided for inspection upon change in tenancy and depended on owners to report turnover to the city.⁸² Notably, under that program, 98 percent of the city's 20,000-plus inspections were the result of tenant complaints rather than reported turnovers. Boston revised its program in 2012 to address this issue, adding regular inspections to all non-exempt rental properties.⁸³

Vacancy Inspections

Some localities require inspections only when a unit is vacated due to a change in tenancy.⁹³ Inspections and repairs may be easier to conduct and less disruptive when a tenant is not present. In addition, by conducting repairs before a tenancy begins, a rental housing inspection program can help protect future tenants from being exposed to dangerous conditions, such as deteriorating lead-based paint or fire hazards.

Notice of Inspection and Entry of Occupied Units

Notice of Inspection

Unlike most complaint-based inspections, proactive rental inspections are undertaken without a request from the occupant. As a result, notice of a pending inspection serves an array of critical functions. By informing tenants about the purpose and process of inspections, notice can allay tenant fears, prepare tenants for a stranger to arrive at door, and encourage tenants to permit entry. Giving tenants notice of the scheduled date and time of an inspection can also increase the likelihood that a tenant will be home and available to permit the inspector to enter. Notice also provides localities with an opportunity to educate tenants and landlords about their rights and duties under the law. Finally, notice can alleviate some privacy concerns that residents may have by giving them the opportunity to, in advance of inspections, store personal items that are unrelated to code enforcement.

✓ Practice Tip

Notices should be clearly worded and provided in a manner that takes into account language and other communication barriers.⁹⁴

In developing notices and other materials to support a periodic rental inspection program, it is important to look at local government policies for guidance on language access. Depending on the applicable federal, state, and local laws, translation of the notice into commonly spoken languages may not only be a best practice, it may be a requirement.

LANDLORD ENTRY

States often have laws defining the reasons for which a landlord may enter a rental property, and the amount of notice a landlord must provide to a tenant before entry. Whether rental housing inspection is a permissible reason for entry depends on state and local law, and this should be considered in designing a proactive rental inspection program.

In addition to the legal question, there are also practical considerations that may impact whether a PRI program encourages or requires landlord presence at inspections. Tenants may be intimidated and not feel comfortable talking openly with an inspector in the presence of the property owner or manager.⁹⁵ This dynamic may reduce the ability of the code inspector to effectively identify substandard living conditions.

Some programs notify property owners and rely on them to give notice to tenants.⁹⁶ However, the critical goals of notice are better served by providing notice directly to tenants as well; in the cases where housing inspection is most needed to address egregious code violations, landlords may be least likely to communicate notice to tenants. Programs provide notice to tenants by mail, posting notice at the property, or both.^{97, 98, 99}

Tenant Consent to Inspector Entry

Under the 4th Amendment to the U.S. Constitution, tenants have the right to be secure in their homes against unreasonable searches. At the same time, state and local police power authorize laws that are reasonably related to the public health, safety, and welfare of residents. The U.S. Supreme Court has recognized that local inspection powers are of “indispensable importance to the maintenance of community health.”¹⁰⁰ There is a strong government interest in preventing “even the unintentional development of conditions which are hazardous to public health and safety.”¹⁰¹

A government agent’s entry into a private home without the tenant’s consent is presumed to be unreasonable, unless there are emergency circumstances or a warrant to justify the intrusion.¹⁰² Therefore, an inspector must have affirmative consent from the resident prior to or at the time of the inspection. Programs may allow inspectors to obtain tenant consent for entry at the time of the inspection¹⁰³ or through a pre-inspection consent form.¹⁰⁴

Under a complaint-based inspection program, where the inspection is generally requested by a tenant, securing permission is typically very straightforward. However, under a PRI program, it may be more complicated for inspectors to get consent to enter from the tenant, for a variety of reasons. For example, a tenant may be wary of government inspectors, have privacy concerns, or even not understand why an inspector has come to the residence. Moreover, the tenant may not be able to be present at the time of an inspection due to work or other obligations.

✓ Practice Tip

Education and outreach by municipal and community groups, discussed later, is often an effective strategy for gaining tenant trust and cooperation.

MUNICIPAL INSPECTORS OR APPROVED PRIVATE INSPECTORS

PRI programs may deploy municipal inspection employees or contractors, or allow licensed third-party inspectors. Many programs, including those in Los Angeles, Fort Worth, and Sacramento, use municipal inspectors. Other localities, including Boulder and Baltimore, require property owners to contract with a licensed home inspector.¹⁰⁵ In Boston and Seattle, property owners may use public inspectors or authorized private inspectors.¹⁰⁶

These differing practices may proceed from state law, historical practice, or a political or economic decision by a locality not to hire additional municipal employees. For example, in Washington, the state supreme court examined the rental inspection program of the City of Pasco, under which (1) landlords could choose from a range of public or private inspectors and (2) landlords did not need to furnish the city with details of the inspection report - only a certification of compliance based upon inspection.¹⁰⁷ The court found that this program did not constitute “state action” or violate state or constitutional protections against unreasonable search. This ruling has affected how other Washington cities have designed their rental inspection programs.

While tenants often give consent to the inspector to enter, a tenant may deny consent for any of the reasons mentioned above. Where necessary, PRI ordinances may empower the locality to seek an administrative inspection warrant from a court of competent jurisdiction.^{108, 109, 110}

Scope of Inspection

PRI programs must designate whether inspections will include: (1) exteriors of buildings; (2) interior common areas; and/or (3) individual units in a building.

Exterior Inspections

Many programs include exterior inspection, while some focus *exclusively* on exterior buildings, yards, and, sometimes, common areas of buildings. Exterior inspections can help to identify nuisances and blighted property, and prevent crime and fires. Analysis of data from the American Housing Survey, conducted by the Census Bureau for the U.S. Department of Housing and Urban Development, has found that exterior and interior conditions are related: the greater the number of certain exterior problems, the more likely that housing has associated interior problems. For example, a sagging roof portends interior problems with pests and moisture.¹¹¹ However, an exterior inspection alone cannot identify unsafe and substandard conditions, such as electrical, plumbing, and structural problems, that reside within the rental unit or the building’s stairs, hallways, and other common areas.^{112, 113}

Kansas City, Missouri’s program conducts inspections of exteriors of buildings, accessory buildings, and yards; in multi-unit buildings, it also conducts inspections of common areas. It only inspects the interior of units that are vacant at the time of the inspection.¹¹⁴

San Francisco conducts periodic inspections of the exterior and common areas of apartment houses and hotels,¹¹⁵ and will only inspect the interior of dwelling units upon the receipt of occupant complaints, or if it is determined that an interior inspection is reasonably necessary to determine whether a housing code violation exists.¹¹⁶

✓ Practice Tip

Beginning a PRI program with exterior inspections and vacant unit inspections may be one strategy for launching a program in communities with obstacles to systematic interior inspections.

RESOURCES FOR HEALTHY HOUSING INSPECTIONS

U.S. Centers for Disease Control and Prevention's Healthy Housing Inspection Manual, developed for environmental health professionals, inspectors, and others, has a visual assessment data collection form as well as a resident questionnaire. The U.S. Department of Housing and Urban Development (HUD) has developed a rating tool for health and safety hazards based on a tool used in the United Kingdom.¹¹⁷ The Pediatric Environmental Home Assessment was created to assist health professionals during home visits.¹¹⁸

Interior Inspections

The most comprehensive systematic rental housing inspection programs mandate interior inspections of rental units, to ensure that the areas where tenants spend most of their time are in safe and healthy condition.

Most municipal code enforcement departments have procedures and checklists that identify what inspectors should look for when conducting an interior inspection of a residence.^{119, 120} These materials, usually designed for complaint-based programs, can be easily adapted for proactive rental inspection programs. However, the process of implementing a systematic rental inspection program can also afford an opportunity to review other aspects of code enforcement, such as the scope of interior inspections, to ensure that the program effectively protects the health of residents.

Sampling formulas: Often, localities cannot devote all the resources necessary to inspect every unit in multi-unit buildings. Instead, these localities may use sampling formulas. In Sacramento, for example, the inspection of a multi-unit building includes all common areas and a random sampling of no less than ten percent of rental housing units.¹²¹ If the inspector determines that a property is in violation of any standard, the inspector is authorized to inspect additional, or all, units of that property.¹²²

Seattle uses a different formula: in buildings containing 20 or fewer units, a minimum of two units must be inspected. In buildings containing more than 20 units, 15 percent of the rental units must be inspected, up to 50 rental units in each building.¹²³

✓ Practice Tip

It is important that code enforcement officials independently determine which units to sample, rather than letting owners select which units are to be inspected. This ensures that representative units, not just the best-maintained ones, are inspected.

LEAD HAZARD INSPECTIONS

While lead-based paint was banned for residential use in 1978, lead remains a health hazard for those who live in housing constructed prior to 1978, particularly for children.

Some PRI programs specifically address lead hazards. Rochester, New York, for example, requires all multi-unit buildings to undergo visual assessment for deteriorated paint and bare soil violations as part of housing inspection.¹²⁴ Owners of housing containing five or fewer units in identified high-risk areas are responsible for having dust samples taken and tested, and submitting the results to the Lead Inspection Unit.¹²⁵ When enacting the law, Rochester established a citizen advisory group to assist with public education and implementation.¹²⁶ An independent evaluation of the ordinance found that by 2010 (four years after the law was enacted), the city had inspected nearly all pre-1978 rental units.¹²⁷ This evaluation suggests that the lead law contributed significantly to declines in children's blood lead levels.¹²⁸ In addition, 94% of units passed visual inspections and 89% of units tested passed dust wipe inspections - much higher rates than were predicted based on prior local and national studies - indicating lead safety of rental housing had improved since enactment of the law.¹²⁹ Finally, while property owners had concerns that the cost of complying with the law would cause widespread abandonment of rental properties due to low property values and narrow profit margins in Rochester's rental housing market, that scenario did not transpire.¹³⁰

Washington DC's law requires rental property owners to obtain a clearance report from a licensed professional, indicating that there are no lead dust hazards or deteriorated paint in any pre-1979 homes that are to be occupied by a family with a child.¹³¹

Enforcement to Address Code Violations

One of the most important elements of any rental inspection program - complaint-based or proactive - is enforcement when violations are discovered. Implementing appropriate remedies for identified code violations (and when a property owner fails to make repairs) helps ensure that program goals are met and tenants are protected from substandard housing conditions.

Localities use a range of tools to enforce property maintenance, housing, sanitary, and health laws. The methods a locality may use are often dependent on state law and on what powers the state delegates to localities.

Generally, the move from a complaint-based system to proactive rental inspection doesn't require major changes in the types of actions taken in response to violations. However, if a locality's existing complaint-based rental inspection program is facing enforcement challenges, the locality should take the opportunity to address these challenges in designing and implementing a more comprehensive program.

The primary goal of PRI programs is to ensure that housing is properly maintained. When an inspection reveals a substandard condition in a covered dwelling, most localities will issue a notice or order to comply, setting out the owner's rights and obligations, as well as the consequences of continued non-compliance.¹³² The order will typically specify a time window for compliance. Los Angeles, for example, allows no more than 30 days for correction of non-serious violations, with the possibility of an extension if significant progress has been completed by the end of 30 days.¹³³ For violations that pose a serious risk to the health or safety of the occupants or the public, Los Angeles requires that the substandard condition must be abated (repaired) in no more than 14 days, with no possibility of extension.¹³⁴

If a violation poses an imminent danger to the health or safety of tenants, most programs move quickly to remedy the situation. In Los Angeles, the city can order that the landlord fix the violation within 48 hours, and then re-inspect the building within the next 24 hours. If the condition has not been abated, the city is authorized to make the repair and then require the property owner to reimburse the city.¹³⁵

Fines, which are a common component of program enforcement when an owner fails to make repairs in a timely manner, are discussed further in the **Funding PRI Programs** section (see page 19).

A few interesting enforcement approaches are described below:

Rent Escrow Accounts

One interesting feature of the Los Angeles Systematic Code Enforcement Program is the city's Rent Escrow Account Program (REAP), which is activated when a property owner fails to fix code violations within the time allotted. After a hearing on the violations, the property units may be ordered into REAP by the manager of the Housing Department. When a property is in REAP, tenants receive a rent reduction for the cited code violations at the property and are given the option of paying their reduced monthly rent into an escrow account or to the landlord. The city records the Notice of REAP as a property lien,

Practice Tip

To prevent evictions and maximize the number of units that can be "saved" and preserved in the rental housing market, PRI programs should strive to exhaust all options for bringing a failing or illegal unit up to code.

✓ Practice Tip

For clarity, in developing a rental licensing program, a locality might consider specifying that an owner's failure to obtain a license is a valid defense that a tenant can use against eviction proceedings.

CDBG FUNDING

Code enforcement is an eligible expense under Community Development Block Grants (CDBG), which are provided by HUD on a formula basis to entitlement communities (cities and urban counties), and to states for non-entitlement communities.¹³⁶ The International Code Council recently published guidelines for code officials regarding the use of CDBG funds for this purpose.¹³⁷

which may restrict refinancing or sale of the property. The property owner is assessed a monthly administrative fee per rental unit. To clear the title of the REAP Notice, the property must come into compliance with codes and all fees due the Housing Department must be paid.¹³⁸ The Housing Department contracts with several nonprofit organizations to provide outreach to tenants about the program and to assist landlords in expediting compliance.¹³⁹

Registration as a Prerequisite to Eviction Actions

Anne Arundel County, MD, requires that property owners obtain a rental license before renting residential property consisting of two or more units.¹⁴⁰ In an eviction action brought by an owner who had failed to obtain the required license, the Maryland Court of Appeals, the state's supreme court, held that the owner could not evict a tenant before complying with the county licensing requirement.¹⁴¹

Monitoring Substandard Properties

In 2007, faced with a backlog of unresolved substandard housing cases and a slow rate of compliance, the city of Lansing created a new program to track and monitor unsafe and substandard housing: the Neighborhood Enhancement Action Team (NEAT). NEAT tracks properties that have been 'tagged' as unsafe for habitation based on internal or external conditions. A tagged property is transferred to the NEAT program after 90 days of noncompliance. For every month that the violations are not addressed, the landlord incurs a \$150 fee. Property owners are not charged the fee if they can demonstrate progress toward habitability. This incentive has had a dramatic effect on the number of tagged properties in the city, which has steadily decreased from 740 in 2007 to 362 in 2013 (224 of which were NEAT properties). At the start of the program, about half of the properties had been tagged for 5-7 years; ten months into the program, the average length of time a property was tagged had dropped to 147 days.¹⁴²

Funding PRI Programs

Most systematic rental inspection programs are funded, solely or in part, by fees levied against property owners. Localities commonly impose fines and penalties for housing code violations or other program violations. Examples of fee schedules from a number of localities are described below.

Registration, license, and program fees: Localities commonly charge registration, program, licensing, or certificate fees to cover the costs of implementing and administering a proactive rental inspection program. These fees are often charged based on the size of the rental property. For example, they may be determined based on the number of rental units; or apportioned at different rates for small, medium or large buildings; or assessed by square footage.

Localities may charge these fees on a one-time or recurring basis, depending on the nature of the fee and the length of the program cycle. For example, Antioch, CA charges a one-time initial registration fee when a property enters the program.¹⁴³ In contrast, Santa Cruz, CA charges an annual registration fee and requires that landlords annually reregister all rental units.¹⁴⁴

Inspection fees: In addition to registration, licensing, or programming fees, some localities assess inspection fees annually (or for each period of a program's cycle) for units subject to mandatory inspection; others assess inspection fees only when an inspection is to actually take place. Localities with self-certification programs may discount or waive the inspection fee for units that are owner-inspected, although they may charge a separate self-certification fee.

Re-inspection fees: Most localities charge a reinspection fee to cover the cost of additional inspections after violations are uncovered during an initial inspection. Targeting these costs to property owners not in compliance can keep fee costs down for landlords who do maintain their properties appropriately. As an incentive for owners to remedy code violations, some localities will only charge this fee on the second or subsequent reinspection, if violations have not been corrected within a specified period after the initial inspection.

Other fees: Some localities impose a fee for rescheduling or for missed appointments. Several localities impose penalties for late payment of any of the required fees. Where the locality provides for abatement of code violations, the abatement fee may cover the costs incurred by the locality, including administration and labor.

Penalties/Fines for violation: Localities may impose administrative or civil (monetary) penalties for violations of the proactive rental inspection program and property maintenance codes. Localities sometimes impose criminal fines as well.¹⁴⁸

✓ **Practice Tip**

Relying heavily on penalties to sustain a program may result in an unpredictable funding stream. Sacramento began its PRI program with a focused pilot program. The city anticipated that the cost of the program would be offset by the revenue from fines and penalties.¹⁴⁵ However, with the implementation of the pilot program, property owners brought their properties into compliance more quickly than anticipated. As a result, the pilot program assessed significantly fewer penalties and generated less revenue than expected.¹⁴⁶ To help ensure that the program could be self-sustaining, Sacramento adopted a different fee schedule when implementing its city-wide program.¹⁴⁷

A Sample of Fee Schedules for PRI Programs

	KANSAS CITY, MO Residential Rental Registration and Inspection Program ¹⁴⁹	SACRAMENTO, CA Rental Housing Inspection Program ¹⁵⁰	BOULDER, CO Rental Licensing Program ¹⁵¹	SANTA CRUZ, CA Rental Dwelling Unit Inspection Program ¹⁵²	WASHINGTON, DC Rental Housing Business License ¹⁵³
Program fee		\$16 per year			\$35 per unit, for buildings with three or more units, charged at the issuance or renewal of the license (not to exceed \$2000 biennially)
License or Registration fee	No fee to register Delinquent registration fee for properties not registered by 1/31: \$50 in February, increasing by \$50 per month, to a maximum penalty of \$500 Additional \$200 per month per structure for failure to register		\$70 per building charged before a rental license is issued or renewed, covering all units within the building In addition, \$70 per unit for units attached to a building but individually owned	\$45 per year per building	\$21.50 annually per unit at the initial issuance of the license
Self-certification fee		Inspection fee waived for units in self-cert program		20% of units @ \$20 per unit	
Inspection fee		\$127 per unit for rental housing units subject to mandatory inspections \$127 per unit for each additional unit inspected because of a violation discovered on the property \$80 rescheduling fee	\$250 per inspection performed	\$20 per unit, to cover the cost of an annual inspection and one compliance reinspection, if necessary Not paid by units in the self-certification program	
Reinspection fee	\$100 for second and each subsequent re-inspection	\$127 per unit for reinspection of each rental housing unit that fails to correct violations within the required timeframe	\$107 per hour, payable if the owner fails to correct any violation after the first compliance reinspection		\$90 for any reinspection of a licensee's premises for routine housing code violations
Penalties	Localities may also impose civil and criminal penalties for violation of a rental housing inspection ordinance or other applicable city codes				

Evaluation

Evaluation is an important, though often overlooked, component of government programs. The purpose of PRI programs is to preserve housing stock, improve habitability for tenants, and ensure that the locality receives property taxes. In these days of shrinking public resources, it is important to make certain that programs achieve their desired outcomes. Also, to ensure effective funding mechanisms, it is necessary to evaluate the costs of programs versus the revenue generated by their fees and penalties.

Under Boston's systematic rental inspection program, an annual report must be provided to the city council detailing the activities of the program, including the number of inspections requested and performed each month by the various types of inspectors, the total number of violations identified through inspections, the number of exemptions requested and granted, the number of violations prosecuted, the amount of fines levied and collected, and an overall assessment of the program and plans for improvements.¹⁵⁴

Beginning in 2014, Seattle, which adopted a periodic rental inspection program in 2012, will require an annual report to the city council that will include an evaluation of properties' registration status (including details about any previously unidentified housing units that have been discovered); property owners' compliance in allowing inspections to be completed within the applicable 60-day timeframe; the results of inspections where properties have a previous history of violations; whether the program fees actually reflect the program costs; the number of inspections that have resulted from complaints; the extent to which the civil warrant process has been used; and any audits and findings on inspections.¹⁵⁵

Kansas City, MO requires its city council to review its program provisions and requirements at least every two years to determine whether to maintain, modify, or terminate the program.¹⁵⁶

Staff in Santa Cruz, CA will provide their city council with a report of rental housing units saved and lost following the first round of proactive registration and inspections.¹⁵⁷

**VENTURA, CA:
INNOVATIVE SOLUTIONS**

In the initial phase of the city's proactive inspection program, inspectors in Ventura, CA found 15 illegal converted rental units—just a small fraction of the 300-500 such units that officials believe exist. In order to meet the city's commitment to address substandard housing and promote a healthy environment, staff made an innovative recommendation, informed by a collaboration with community members: Grant amnesty to illegally converted units for 30 months, suspending all fines and penalties while owners brought the units up to code. Eligibility was confined to second units on properties that allowed residential use, with an occupancy date prior to the city council's initial action.

Low-income landlords were also eligible for newly created Affordable Rental Housing Preservation Loans to cover the cost of compliance, on the condition that tenants be charged federally established affordable rates for the duration of the 15-year loan term.¹⁵⁸ The program includes an educational component, bases fees on the in-service date (when the property was first occupied), and waives zoning violations that do not impact health and safety, including setbacks, lot coverage, and on-site parking requirements. As of August 2013, the city had received 53 applications, and had inspected and approved 41 properties, with another 5 in process.¹⁵⁹

CHALLENGES WHEN IMPLEMENTING PRI PROGRAMS

PRI programs can yield important improvements in a locality's housing stock. But they may also amplify many of the challenges that arise with traditional complaint-based programs, because (1) proactive inspection programs typically bring inspectors into contact with a much wider cross-section of a locality's housing, and (2) inspections are not initiated exclusively by tenant complaints. In some cases, code enforcement activities can potentially result in displacement of tenants. This section examines some common challenges, and the following section offers strategies for addressing these challenges to maximize the effectiveness and benefits of PRI programs.

Uninhabitable and "Illegal" Units

In extreme cases, an inspector may find substandard conditions that immediately threaten the health and safety of residents. PRI programs should include measures that require landlords to fix properties quickly; however, in the worst cases, the locality may require a tenant to vacate the property.

Inspectors may also encounter "illegal" units: units that have not been registered or licensed, and units that exist in violation of zoning or building codes. Where possible, localities should aim to bring units into compliance to preserve rental housing stock.

Where uninhabitable or illegal units cannot be brought into compliance, relocation programs and supportive social programs, discussed in more detail below, are critical to ensure that tenants remain housed.

Tenant-Side Code Violations

Because PRI program inspectors are not only invited into rental housing units by tenants filing complaints, they are more likely to uncover tenant-side code violations or illegal occupancies than they would under complaint-based programs. Because the central goal of proactive rental inspection programs is to maintain housing in safe and healthy condition, code enforcement should prioritize remedying such violations rather than displacing tenants from their homes.

Hoarding: About three to five percent of Americans suffer from hoarding.^{160, 161, 162, 163}

Severe hoarding not only puts a tenant and other occupants of a housing unit at risk, but may place neighboring residents at risk of fire, disease, or infestation of vermin.^{164, 165, 166}

This disorder is not widely understood and localities often struggle with effective ways to address hoarding.¹⁶⁷ For example, one study out of New York found that "almost a quarter of individuals seeking help for housing problems from a community eviction prevention organization met the criteria for [hoarding disorder]; only about half of these individuals were receiving mental health treatment."¹⁶⁸ However, as hoarding is a form of mental illness,¹⁶⁹ localities should identify ways to assist hoarders without rendering them homeless.^{170, 171}

DISPLACEMENT AND HEALTH

Like substandard conditions, housing instability, displacement, and homelessness have significant, negative impacts on health. Children and adults who experience housing instability and homelessness are at greater risk for poor health than those in stable housing.¹⁷² Stable housing can improve mental health outcomes for residents, reduce stress-related health outcomes, and provide a stable foundation for accessing other critical social and health services.¹⁷³

✓ Practice Tip

As localities aim to improve the health of families and communities through code enforcement, it is critical that they consider and address any potential for displacement, to ensure that health gains through better housing conditions are not paired with health losses through displacement.

For example, there are over 20 hoarding task forces across the state of Massachusetts, organized by a range of agencies, including county health departments, senior services agencies, housing authorities, local governments, and housing nonprofits. These task forces are supported by a Statewide Steering Committee on Hoarding (SSCH), facilitated by MassHousing, a housing nonprofit. The SSCH was created to bring together professionals from different sectors to address the complex psychological and policy issues associated with hoarding. To date, the SSCH has conducted trainings for over 2,000 people, and has developed a risk assessment tool.^{174, 175}

Overcrowding: Overcrowding of units, especially in localities with expensive or tight housing markets, is another challenge for PRI programs. Low-income residents may have few alternatives to shared housing.^{176, 177} However, where inspectors find that occupancy levels violate applicable codes, tenants may be displaced.

Rent Increases

When property owners make substantial repairs to a rental unit, they may pass the cost of repairs along to tenants in the form of significant rent increases. However, by identifying conditions early, periodic rental inspection programs may also help limit the cost of deferred maintenance. In addition, some states have laws that prevent landlords from collecting rents if a municipal inspection has identified violations and repairs remain outstanding after a reasonable time.¹⁷⁸

STRATEGIES FOR SUCCESS

As increasing number of localities have enacted PRI programs, a number of strategies have emerged to address the above challenges and ensure successful programs. We highlight a few below.

Involve Diverse Stakeholders in Designing the Program

As described above, PRI programs differ from locality to locality. The most effective programs are targeted to local housing stock characteristics and the specific concerns of the community. In taking this approach, proactive code inspections program should be designed with input from diverse stakeholder groups.¹⁷⁹ In Seattle, for example, the city council required the Department of Building Inspections to convene a Residential Rental Property Licensing and Inspection Stakeholder Group, which would issue recommendations for the Rental Registration and Inspection Ordinance.¹⁸⁰ The stakeholder group met almost a dozen times over a six-month period, with the assistance of a professional facilitator and mediator. The input of all represented groups was carefully documented.¹⁸¹

Involve Community-Based Organizations in Implementation

Proactive rental housing inspection programs bring code enforcement officers into contact with a broader cross-section of residents than do complaint-based programs - including many residents who have not affirmatively sought out housing inspections. In order to help educate tenants and landlords about rental housing inspections, allay resident concerns, and ensure effective implementation of inspections, some localities have involved community members and nonprofit organizations in the implementation of their programs.

In Los Angeles, after repeated incidents in which city inspectors were unable to gain entry into homes for lead inspections, the Healthy Homes Collaborative, an association of community-based organizations, partnered with the Los Angeles Housing Department and the L.A. County Department of Public Health to ensure that violations are repaired safely. Under the partnership, a member of the collaborative visits selected homes prior to scheduled city inspections. The collaborative representative assists residents in preparing for inspections by educating residents about lead hazards and lead-safe work practices, providing information and referrals about blood lead testing and how to report unsafe repair work, listing potential defects, and informing residents of their legal rights.¹⁸² Significantly, city inspectors who visited properties that were pre-visited by collaborative staff have gained entry 80 percent of the time, compared with 20 percent for homes that were not pre-visited.¹⁸³

Similarly, with difficult cases, such as those involving hoarding, overcrowding, or potential displacement, housing inspectors should collaborate with social and legal services agencies and community organizations, which can assist tenants by helping them access critical supportive services.

Provide Training for Code Enforcement Staff

As proactive rental inspection programs bring inspectors into wider contact with residents, it is very important that officers be able to interact effectively with a diverse population. In tandem with implementing proactive rental inspection programs, localities can provide training to code enforcement officers to ensure that they are prepared to: conduct inspections in a culturally sensitive manner; be attentive to the special concerns of particular groups (e.g., seniors, undocumented persons); and employ effective strategies to overcome language and other communication barriers. In particular, having multilingual inspectors and support staff ensures that all tenants are able to communicate effectively throughout the inspection process.

The Boston Inspectional Services Department briefs and trains other city staff who might interact with the program, such as the building division. Division heads are briefed on the program's budget, staffing, and operations at biweekly meetings.¹⁸⁴

Provide Education, Outreach and Ongoing Support for Landlords and Tenants

Unlike complaint based-systems, PRI programs affirmatively aim to interface with most landlords and tenants. Ensuring that all parties understand the program and their obligations under the program helps to ease the transition.

A number of localities have developed programs to help educate landlords and tenants about the rental inspection program and their obligations; many also provide written materials and checklists for tenants and landlords on applicable housing code provisions. Other localities carry out far-reaching publicity campaigns, including billboards, posters on bus shelters,¹⁸⁵ and notices on property tax and water bills.¹⁸⁶ Los Angeles conducts a full range of workshops and monthly drop-in sessions to address questions.¹⁸⁷ Sacramento requires that owners distribute city-approved forms concerning tenants' rights and

responsibilities before the commencement of any tenancy.¹⁸⁸ With the support of the mayor's office, Boston's Inspectional Services Department holds monthly landlord seminars to discuss the rental registration program and inspection process. These seminars are scheduled in the evening to encourage attendance.^{189, 190} Kansas City, KS, staff are working with a local community college to develop an online training program for landlords.¹⁹¹ Programs should also work with tenant housing organizations and legal aid organizations to ensure that tenants can understand and assert their rights.

Implement Complementary Programs

Finally, PRI programs can be more effectively implemented when the locality also puts into place complementary programs to address related housing issues.

Funded relocation: Funded tenant relocation assistance programs help ensure that displacement resulting from code enforcement efforts doesn't result in housing instability and homelessness, which have significant negative health impacts.^{192, 193, 194} Los Angeles, for example, has a Tenant Relocation Assistance Program, which entitles a tenant to financial assistance from the property owner to find new housing.¹⁹⁵ Often, relocation programs will provide different levels of funding for temporary and permanent displacement. In some instances, owners may be unable or unwilling to pay relocation fees to tenants promptly - or at all. For this reason, and because low-income tenants often lack sufficient assets to move readily, it is critical that localities set aside designated funds to pay tenants when landlords cannot. Municipal relocation ordinances sometimes allow the locality to place a lien on the property to recoup these relocation payments from the owner.

Financial assistance for low-income landlords to make repairs: There are some instances where low-income property owners may be unable to make repairs on rental properties, a situation magnified by the recent mortgage and credit crises. Financial assistance for low-income landlords can help ensure that needed repairs get made.

Rent control: As mentioned in the previous section, tenants may be subject to rent increases after a landlord conducts repairs to bring a unit into compliance. In some localities, where permitted under state law, rent control laws may protect tenants from sharp rent increases by limiting allowable pass-throughs of program fees. For example, in Los Angeles, landlords are permitted to pass through the registration and inspection fees onto tenants, but if they do so, they must pass the charges along as prorated monthly fees so that tenants can absorb the cost over the course of a year.¹⁹⁶ In addition, while localities with rent control ordinances allow landlords to recoup their capital improvement costs from tenants, they may require that the costs be recouped in a gradual fashion over a period of time, such as several years.¹⁹⁷

Public access to code violation information: By providing tenants and the public with readily available registration status and code violation information about specific properties, localities can incentivize rental owners to comply with registration requirements and give the community tools for enforcement as well as critical information.

Grand Rapids provides online access to its lists of registered properties, allowing tenants or prospective tenants to easily find out whether properties are registered and whether registered properties have certificates of compliance.¹⁹⁸ Boston will maintain an online, searchable Chronic Offenders Registry that includes a list of landlords who regularly fail to correct problems.¹⁹⁹

In an effort to increase prospective tenants' access to rental property information, Code for America, in collaboration with the City of San Francisco and other industry stakeholders, developed a reportable, uniform data standard for housing code violations.²⁰⁰ By adopting a uniform data standard, San Francisco ensures that the data is available for use in additional applications - the sum effect of which is to increase consumer access to housing information. A number of other localities have also committed to adopting the standard, including Las Vegas, NV; Kansas City, MO; Gary and Bloomington, IN; Olathe, KS; and Bayside, WI.²⁰¹

CONCLUSION

Health and housing are tightly connected. To protect residents from an array of housing related health risks – such as asthma, allergies, lead poisoning, and injury – localities must ensure that local housing stock is well-maintained and in compliance with applicable housing and property maintenance codes. Proactive rental inspection programs can effectively achieve this by: addressing housing conditions before they become severe; protecting vulnerable tenants who often fall through the cracks of a complaint-cased system; and preserving critical housing stock. At the same time, PRI programs can benefit landlords and communities by protecting the property values of rental housing and neighboring homes.

There are many different ways to design a municipal PRI program. The most effective programs will be tailored to the characteristics of the local rental housing stock, factor in on-the-ground political and resource limitations, anticipate potential challenges in adoption and implementation, and incorporate broad-based strategies to ensure that local rental housing remains not only safe and healthy, but stable and affordable for all tenants.

- ⁹¹ *Id.* at § 21.06.070(B)(1).
- ⁹² *Id.* at § 21.06.080(B). In contrast, self certification is the norm for the program in Berkeley, CA, which requires that all owners annually self-certify their rental units. Berkeley, Cal. Municipal Code § 12.48.050(A). However, an owner or a tenant may request instead that the city conduct an inspection to ascertain compliance with the applicable housing safety standards. If the Housing Department is not available to conduct the inspection, owners are still required to annually self-certify. *Id.* at § 12.48.050(B). If no violations are found during the city inspection, or any violations are corrected within the cure period, the unit will be exempt from the annual self-certification for approximately three years following the inspection or upon revocation of the certificate of compliance. Additionally, every rental unit is subject to a periodic city inspection, not more than once every three years. *Id.* at § 12.48.070(A).
- ⁹³ *See, e.g.,* Kansas City, Mo. Code of Ordinances § 56-364.
- ⁹⁴ For example, Washington, D.C. offers the Proactive Inspection Consent Form on their website in Spanish, Korean, Vietnamese, and Amharic. - ⁹⁷ *See, e.g.,* Sacramento, Cal. Municipal Code § 8.120.090 (requiring that the city shall serve written notice to the owner and the local contact representative, and shall mail a copy of the inspection notice to the rental housing units on the property).
- ⁹⁸ Los Angeles, Cal. Municipal Code § 161.602.2 (requiring that the General Manager give written notice to the owner and the tenants. Notice to the tenants may be mailed or posted in the public area of the premises.).
- ⁹⁹ *See also,* Los Angeles, Cal. Municipal Code § 161.604 (requiring that the city shall provide written notice to the occupant in each unit that an inspection occurred, including a telephone number and address where the occupant can get further information about the inspection).
- ¹⁰⁰ *Camara v. Municipal Court of City & County of San Francisco*, 387 U.S. 523, 537 (1967) (quoting *Frank v. Maryland*, 359 U.S. 360, 372 (1959)).
- ¹⁰¹ *Camara v. Municipal Court of City & County of San Francisco*, 387 U.S. at 535.
- ¹⁰² *Id.* at 528-529.
- ¹⁰³ *See, e.g.,* Los Angeles, Cal. Municipal Code § 161.601 ("This authority shall be subject to the following limitations: (1) If the premises is occupied, the General Manager shall first present proper credentials to the occupant and request entry explaining his reasons... If entry is refused or cannot be obtained, the General Manager shall have recourse to every remedy provided by law to secure lawful entry and inspect the premises, including but not limited to securing an inspection warrant pursuant to California Code of Civil Procedure.").
- ¹⁰⁴ *See, e.g.,* City of Sacramento, Rental Housing Inspection Program, "Tenant Consent to Inspect Rental Housing Units." 2012. Available at: <http://portal.cityofsacramento.org/~media/Files/CDD/Code%20Compliance/Programs/Rental%20Housing/RHIPTenantConsent2-7-2012.ashx>
- ¹⁰⁵ Boulder, Colo. Rev. Code of Ordinances § 10-3-7(b)(1); Baltimore County, Md. Code of Ordinances § 35-6-107(b).
- ¹⁰⁶ Boston, Mass. Municipal Code § 9-1.3; Seattle, Wash. Municipal Code § 22.214.020(9).
- ¹⁰⁷ *City of Pasco v. Shaw*, 161 Wash.2d 450, 465 (2007).
- ¹⁰⁸ *See, e.g.,* Antioch, Cal. Municipal Code, § 5-20.205 (also allocating the costs of obtaining a warrant to the property owner).

- ¹⁰⁹ The U.S. Supreme Court, in a challenge to a San Francisco housing inspection program, clarified that administrative searches, such as routine housing inspections, do not require the same showing of particular probable cause to validate an inspection warrant as required with a criminal search warrant. Instead, any reasonable legislative program or standards that clarify why a unit is subject to inspection will satisfy the “cause” requirement of an administrative warrant. *Camara v. Municipal Court of City & County of San Francisco*, 387 U.S. 523, 538-39 (1967) (“[I]t is obvious that ‘probable cause’ to issue a warrant to inspect must exist if reasonable legislative or administrative standards for conducting an area inspection are satisfied with respect to a particular dwelling. Such standards, which will vary with the municipal program being enforced, may be based upon the passage of time, the nature of the building (e.g., a multifamily apartment house), or the condition of the entire area, but they will not necessarily depend upon specific knowledge of the condition of the particular dwelling.”).
- ¹¹⁰ Some states may have particular statutes addressing the requirements. *See, e.g.*, Cal. Code of Civ. Pro. § 1822.52 (California has enacted into law this reduced cause showing for administrative warrants); N.C. Gen. Stat. Ann. § 160A-424(a) (narrowly defining “reasonable cause” for the purpose of preemption).
