RE:

An Informational Report Regarding the Allocation of Monies from the Self-Insurance General Liability Fund (Fund 1100) to Departments for the Fiscal

Year 2010-11 Budget Adjustment of General Liability Costs Based on

Implementation of the "Phoenix Model" of Risk Management Cost Allocation, Reflecting a Projected Ultimate Loss of \$4.51 per \$100 Payroll in Fiscal Year

2010-11

#### **SUMMARY**

The City Council has directed staff to prepare an annual risk management cost allocation plan mirrored after a program that was developed by the City of Phoenix, Arizona. This program is commonly referred to as the "Phoenix Model". The plan has five (5) components which are intended to track liability spending and incentivize departments into improving their programs that incur the liability exposures.

This report transmits the findings of the Risk Management consulting firm, ARMTech / Aon Global Risk Consulting ("ARM Tech"), who analyze historic loss information for the purpose of fine-tuning the cost allocation amounts for Fiscal Year 2010-11. The data analyzed by ARMTech was provided by the City Attorney's Office. The consultant's report is attached for Council's review. The findings in the ARMTech report should be used as a basis for adjusting departmental Self Insurance Fund (1100) budget during the FY 2010-11 Midcycle.

#### FISCAL IMPACT

This report is provided for the purpose of informing Council on the allocation of monies from the Self-Insurance General Liability Fund (1100) to Departments for the Fiscal Year 2010-11 Midcycle Budget Review, based on historic loss information in Fiscal Year 2008-09. The total General Liability payout for Fiscal Year 2010-11 is projected by ARM Tech to be \$17,200,370. The projections provided below for Fiscal Year 2010-11 are adjusted to reflect the most recent actuarial review conducted by ARM Tech.

Table 1

The recommended net increase to the Self Insurance Liability fund is based on the *projected losses paid* data which increased from \$16,395,226 for 2008/09 to \$16,961,674 for 2009/10. This is an increase of \$566,448, or 3.5%. The main reason for this increase is an increase in the outstanding losses for the 2007/08 year. In the prior actuarial study, it was estimated that the outstanding losses for 2007/08 as of 6/30/08 would be \$9,871,351 (*shown in Exhibit LI-12 of Attachment A, report date January 27, 2009*). In the current actuarial study based on 6/30/09 data, we estimate that the outstanding losses for 2007/08 are \$15,334,559 (*shown in Exhibit LI-11 of Attachment A*). This change is due to a large increase in the 2007/08 case reserves, which increased from \$3,964,051 as of 6/30/08 to \$9,150,042 as of 6/30/09. Many of these reserve changes were the result of conferring with the City's Excess Liability Insurer and their recommendations to change the case reserve values. Additionally, there are several large open claims for this year, which are shown in *Exhibit LI-22 of Attachment A*.

The overall increase from the adopted FY2010-11 budget to the amount proposed by ARM Tech is \$560,160. The difference would have to be funded by an increased transfer from the General Purpose Fund, and will be incorporated into the FY 2010-11 Midcycle Budget Process. The proposed budget revision includes expenditures associated with the management and development of claims (contracted investigators, outside counsel, expert witnesses, internal staff costs, Third-Party Administrator costs, etc.) including the internal City Attorney personnel costs.

#### **BACKGROUND**

On January 6, 2004, City Council directed staff to implement a Risk Management Cost Allocation Program (RMCAP) to allocate monies from the Self-Insurance General Liability Fund (Fund 1100) to the Oakland Police Department, Oakland Fire Department, Public Works Agency and Office of Parks and Recreation. The monies allocated to the departments would then be used for payment of General Liability claims. This program was modeled after the Risk Management Cost Allocation Program utilized by the City of Phoenix, Arizona, hereinafter referred to as "the Phoenix Model."

Other components of the City Council directive regarding the RMCAP include:

- 1) Create a system of rewards and/or recognition for employees in each division whose job performance contributed to loss prevention in the previous year;
- 2) Fund the development of a loss prevention program in the Public Works Agency and Oakland Police Department, developed in conjunction with the City Attorney's Office and Risk Management Division (RMD), to target a 15 percent loss reduction;
- 3) Continue regular reporting on losses and loss prevention to the Finance and Management Committee;
- 4) Require departments (in conjunction with the City Attorney's Office) to return to Council if they exceed their budget allocation and need additional funding for liability payouts; and,
- Allow departments to retain a percentage of their unspent liability budget allocation, with guidelines for the use of those retained funds to be established by the Finance Committee. Staff intends to return to Council with a revision to the legislation proposing that retention of unspent liability funds only occur when the Self Insurance Liability fund negative balance is eliminated. A plan exists to eliminate the negative fund balance. Although Council approved suspending repayments in FY 2009-10, they will resume in FY 2010-11.

This report meets the requirements of the Phoenix Model reporting structure and provides loss reporting information as required by component three of the above directives.

#### **KEY ISSUES AND IMPACTS**

There are two primary goals of the Risk Management Cost Allocation Plan (RMCAP):

- 1. Allocate and appropriate funds sufficient to cover the City's risk funding needs.
- 2. Charge loss funds in an equitable way that rewards departments with better than expected loss experience and provide incentives for all departments to improve risk management practices.

Based on the actuarial analysis, the recommended funding levels reported in the Fiscal Impacts section of this report should be used as the target allocation for the payment of departmental general liability losses for Fiscal Year 2009-10.

The attached actuarial report (Attachment A) also provides loss reporting data in exhibits LI-24 through LI-26.

	Item: _	
Finance & Manag	ement Comi	nittee
	February 9,	2010

- Exhibit LI-24 identifies the number of claims per \$1 million payroll, average cost per claim and loss rate by department
- Exhibit LI-25 identifies the actual paid losses by department for Fiscal Year 2008-09
- Exhibit LI-26 reports the top causes of loss by department relevant to highest frequency and highest average payout over the past 5 years.

As shown in Table 2, below, the Oakland Fire Department, Office of Parks and Recreation, and the Oakland Police Department stayed within the budgeted amount for General Liability losses during Fiscal Year 2008-09. The Public Works Agency exceeded their budget by 12.5%.

Department	FY 2008-09 Budget Allocation	FY 2008-09 Actual Paid Losses	Variance Favorable/ (Unfavorable)
Oakland Fire Department	\$1,171,760	\$1,015,691	\$156,069
Office of Parks and Recreation	335,740	161,860	173,880
Oakland Police Department	6,591,780	5,801,890	789,890
Public Works Agency	2,629,140	2,956,764	(327,624)
All Other Agencies / Departments	6,251,230	3,505,684	2,745,546
CITYWIDE TOTAL	\$16,979,650	\$13,441,889	\$3,537,761

Table 2

An element of the Phoenix Model program specified that departments were to return to Council if they exceeded their budget allocation and needed additional funding for liability payouts; and, that departments were allowed to retain a percentage of their unspent liability budget allocation for approved projects or programs as presented to Council.

The City Attorney's Office is required to bring all settlement proposals in excess of \$5,000 to the City Council for approval. Discussion of the involved case(s) and expenditure approval take place in closed session, with the approval reported in a meeting of the full Council. Departmental notice of excessive spending in their allocation is to take place during the closed session reporting. On the other hand, no department that saved (from their budget allocation) in the Self Insurance Liability Fund has been given an opportunity to keep the savings, given the large negative balance in the fund.

Since its last report in January 2009, the FMA-Risk Management Division (RMD) has continued to work closely with the Oakland Police Department (OPD), the Oakland Fire Department (OFD) and Public Works Agency (PWA) to facilitate their loss prevention efforts.

	Item:
Finance & Manage	ment Committee
	February 9, 2010

RMD continues to support PWA in its departmental safety program including the PWA Safety Incentive Program and in-house safety services program. The safety services consultant actively participates in the development and growth of PWA's internal risk management program, conducting inspections, accident investigations, trainings, program development and other safety related services.

On a City-wide perspective, the City Attorney's Office is transitioning from an internal claims administration model to a third-party administered claims model. This should result in improved efficiencies in claims management and assist in containing costs associated with general liability claims administration.

It should also be noted that effective July 1, 2009, the City's excess liability retention changed from \$2 Million to \$4 Million. This was partially based on the number of large loss claims filed by the City, primarily from the Police Department. It is anticipated that by going to a third-party administrator managed system, the City will be able to secure a reduced retention in upcoming policy renewal cycles. RMD will continue to work closely with City Attorneys and their contracted third-party administrator to meet the requirements of our excess insurer.

RMD will also be evaluating the effectiveness of this Risk Management Cost Allocation Program as compared to those utilized by other jurisdictions. To ensure the program is meeting best-practice standards and functioning in the most effective and impactful manner, it is beneficial to perform a critical program review from time to time. Staff expects to provide Council with an evaluation and recommendations for program modifications (if any) in the next reporting cycle.

#### SUSTAINABLE OPPORTUNITIES

**Economic:** There are no economic opportunities associated with this report.

**Environmental:** There are no environmental impacts associated with this report.

**Social Equity:** There are no economic issues associated with this report.

#### DISABILITY AND SENIOR CITIZEN ACCESS

There are no disability or senior access issues associated with this report.

#### ACTION REQUESTED OF THE CITY COUNCIL

Staff recommends the City Council accept this informational report regarding the allocation of monies from the Self-Insurance General Liability Fund (Fund 1100) to departments for based on the "Phoenix Model" of Risk Management Cost Allocation.

Respectfully submitted,

Cheryl Yaylor

#### Actuarial Study of the Self-Insured Liability Program as of June 30, 2009

This study has been completed for the City of Oakland, California, for the specific objectives listed in the study. It contains the analysis and conclusions of our work.

Each section and appendix of the study is an integral part of the whole. We recommend a review of the entire study prior to reliance upon this study.

No key personnel have a relationship with the City of Oakland, California, that may impair our objectivity.

Please call if you have any questions. Thank you for the opportunity to be of service.

Respectfully submitted,

ARM TECH

# I. Background

The City of Oakland (the City) was fully self-insured for liability (combined general and automobile liability) until November 11, 1998. Effective November 11, 1998, the City began purchasing excess insurance.

The history of the City's self-insured retentions for liability is as shown in Table I-1.

Table I-1 Self-Insured Retentions (Liability)

Claim Period (1)	Self-Insured Retention (2)	Aggregate (3)
To 11/10/1998	Unlimited	None
11/11/1998 and subsequent	\$2,000,000	\$25,000,000

Note: Above information provided by the City.

A self-insured retention of \$2 million is assumed through 2018/19.

We have not reviewed the collectibility of the excess insurance.

The fiscal period runs from July 1 through June 30.

## II. Objectives

The specific objectives of this study are:

1. **Estimate Outstanding Losses.** Estimate outstanding losses (including allocated loss adjustment expenses [ALAE]) as of June 30, 2009.

The estimated outstanding losses are the cost of unpaid claims. The estimated outstanding losses include case reserves, the development of known claims and incurred but not reported (IBNR) claims. ALAE are the direct expenses for settling specific claims. The amounts are limited to the self-insured retention.

2. **Project Ultimate Losses.** Project ultimate losses (including ALAE) for 2009/10 through 2011/12.

The projected ultimate losses are the accrual value of losses with accident dates during 2009/10 through 2011/12, regardless of report or payment date. The amounts are limited to the self-insured retention.

3. **Project Losses Paid.** Project losses paid during the 2009/10 through 2011/12 years.

The projected losses paid are the claim disbursements during 2009/10 through 2011/12, regardless of accident or report date. The amounts are limited to the self-insured retention.

- 4. **Size of Loss Distribution Analysis**. Analyze the distribution of losses in various layers.
- 5. **Recommend Funding.** Recommend funding by City department for 2009/10 through 2011/12.

The recommend funding is based on expected loss payments in 2009/10 through 2011/12. The funding is allocated by City department based on each department's exposure to loss and actual loss experience.

- 6. Analysis by Department and Cause of Loss. Analyze frequency (number of claims per exposure), severity (average cost per claim), and loss rate (cost per exposure) by City department. Review frequency and severity by cause of loss.
- 7. **Affirm GASB Statement No. 10.** Provide a statement affirming the conclusions of this report are consistent with Governmental Accounting Standards Board (GASB) Statement No. 10.

## III. Conclusions

We have reached the following conclusions:

## 1. Estimate Outstanding Losses

We estimate outstanding losses as of June 30, 2009 to be as shown in Table III-1.

Table III-1
Estimated Outstanding Losses
at Expected (50%) Confidence Level
June 30, 2009

(A)	Estimated outstanding losses	\$49,236,516
(B)	Present value of estimated outstanding losses	45,218,962

Note: (A) and (B) are from Exhibit LI-11.

The present value of the estimated outstanding losses is the amount of money, discounted for anticipated investment income, required to meet unpaid claims. It is calculated based on a 3.98% yield on investments, as provided by the City.

The estimated outstanding losses reflect the excess insurance maintained by the City.

The implementation guide for GASB Statement No. 10 specifies that a liability for outstanding unallocated loss adjustment expenses (ULAE) needs to be established for governmental entities. ULAE are primarily composed of future claims administration for open claims. They are typically 5% to 10% of the estimated outstanding losses.

## 2. Project Ultimate Losses

We project ultimate losses for 2009/10 through 2011/12 to be as shown in Tables III-2A through III-2C.

Table III-2A
Projected Ultimate Losses
2009/10
(at \$2 Million LIABILITY SIR)

	ltem `	Amount (2)	Rate per \$100 of Payroll (3)
(A)	Projected ultimate losses	\$17,190,000	\$4.42
(B)	Present value of projected ultimate losses	15,097,000	3.88

Note: (A) and (B) are from Exhibit LI-10.

Table III-2B
Projected Ultimate Losses
2010/11
(at \$2 Million LIABILITY SIR)

	ltem (1)	Amount (2)	Rate per \$100 of Payroll (3)
(A)	Projected ultimate losses	\$18,060,000	\$4.51
(B)	Present value of projected ultimate losses	15,861,000	3.96

Note: (A) and (B) are from Exhibit LI-10.

# Table III-2C Projected Ultimate Losses 2011/12 (at \$2 Million LIABILITY SIR)

ltem (1)		Amount (2)	Rate per \$100 of Payroll (3)
(A)	Projected ultimate losses	\$18,974,000	\$4.60
(B)	Present value of projected ultimate losses	16,663,000	4.04

Note: (A) and (B) are from Exhibit LI-10.

The present value of the projected ultimate limited losses is the amount of money, discounted for anticipated investment income, required to meet claims. It is calculated based on a 3.98% yield on investments, as provided by the City.

All costs other than losses are additional.

Projected ultimate losses for seven additional years (2012/13 through 2018/19) are shown in Exhibit LI-10 (page 43). We emphasize that due to the length of the projection period, there will be greater than normal variability in the estimates.

#### 3. **Project Losses Paid**

We project losses paid during 2009/10 through 2011/12 to be as shown in Table III-3.

Table III-3 **Projected Losses Paid** 2009/10 through 2011/12

	ltem	2009/10	2010/11	2011/12
	(1)	(2)	(3)	(4)
(A)	Projected losses paid	\$16,961,674	\$17,200,370	\$17,283,638

Note: (2) is from Exhibit LI-12.

(3) is from Exhibit LI-13.

(4) is from Exhibit LI-14.

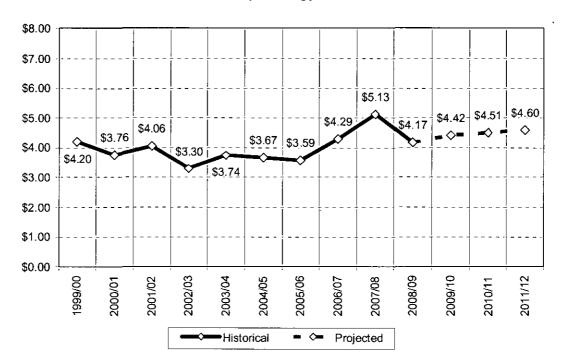

All costs other than losses are additional.

Projected losses paid for seven additional years (2012/13 through 2018/19) are shown in Exhibits LI-15 through LI-21. We emphasize that due to the length of the projection period, there will be greater than normal variability in the estimates.

## **Loss Experience Trends**

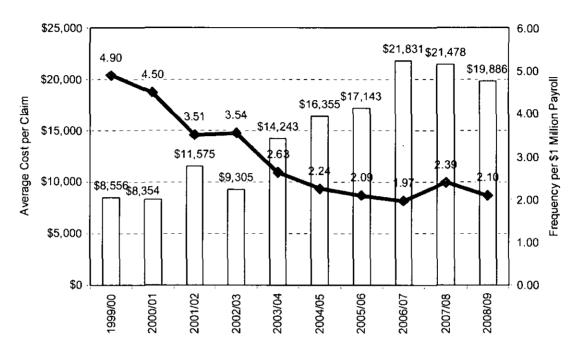

Graphs III-1 and III-2 show loss experience trends for liability as measured by loss rate per \$100 of payroll and frequency and severity, respectively.

Graph III-1 Loss Rate per \$100 of Payroll (Liability)

Note: Loss rates per \$100 of payroll are from Exhibit LI-10, columns (4) and (7).

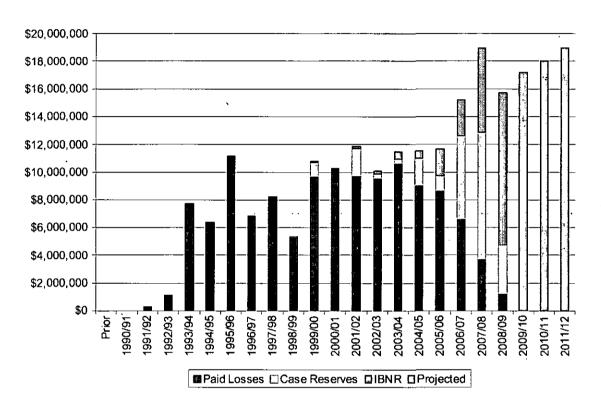

Graph III-2 Frequency and Severity (Liability)

Note: Frequency amounts are from Exhibit LI-8, Section 1, column (7). Severity amounts are based on Exhibits LI-8 and LI-9.

Graph III-3 shows the composition of the projected ultimate limited losses for liability.

Graph III-3
Composition of Projected Ultimate Limited Losses
(Liability)

Note: Amounts through 2008/09 are from Exhibit LI-11.
Amounts for 2009/10 through 2011/12 are from Exhibit LI-10.

A list of large claims with limited reported incurred losses \$1 million or greater as of June 30, 2009 is as shown in Exhibit LI-22.

## 4. Size of Loss Distribution Analysis

Table III-4 shows the distribution of losses in various layers for liability.

Table III-4
Size of Loss Distribution
(Liability)

	Layer (1)	Total Reported Claims (2)	Percent of Total (2)/Total(2) (3)	Cumulative Percent of Total (4)	Total Reported Incurred Losses (5)	Percent of Total (5)/Total(5) (6)	Cumulative Percent of Total (7)
(A)	\$0.01 to \$5,000	13,641	85.5%	85.5%	\$8,159,939	4.2%	4.2%
(B)	\$5,000 to \$10,000	737	4.6%	90.1%	5,148,815	2.7%	6.9%
(C)	\$10,000 to \$50,000	1,072	6.7%	96.9%	24,720,717	12.9%	19.8%
(D)	\$50,000 to \$100,000	238	1.5%	98.4%	16,797,619	8.7%	28.6%
(E)	\$100,000 to \$250,000	166	1.0%	99.4%	26,081,999	13.6%	42.1%
(F)	\$250,000 to \$500,000	50	0.3%	99.7%	17,434,521	9.1%	51.2%
(G)	\$300,000 to \$750,000	15	0.1%	99.8%	9,170,411	4.8%	56.0%
(H)	\$500,000 to \$1,000,000	7	0.0%	99.9%	6,282,260	3.3%	59.3%
(I)	\$1,000,000 to \$2,000,000	14	0.1%	99.9%	18,170,918	9.5%	68.7%
(J)	Over \$2,000,000	9	0.1%	100.0%	60,051,902	31.3%	100.0%
(K)	Total (A) (J)	15,949	100.0%		\$192,019,101	100.0%	

Note: See Exhibit LI-23. Claim counts exclude claims with incurred value of \$0.

About 90% of the non-zero claims reported are below \$10,000 and they represent about 7% of the incurred amounts. The remaining 10% of the claims consume about 93% of the incurred amounts.

A size of loss distribution by year and loss layer as of June 30, 2009 is as shown in Exhibit LI-23.

### 5. Recommend Funding

The City requested that ARM Tech develop a cost allocation plan that is similar to that employed by the City of Phoenix, Arizona. Based on discussions with staff of the City of Phoenix, we learned that they allocate their costs by department based on five years of claim and exposure data (number of employees). The allocation is provided in Exhibits LI-27 through LI-34 (pages 60 through 67).

We recommend funding by City department for 2009/10 through 2011/12 to be as shown in Table III-5.

Table III-5
Recommended Funding by Department
2009/10 through 2011/12
(at \$2 Million LIABILITY SIR)

	Department (1)	Projected Loss Funds 2009/10 (2)	Projected Loss Funds 2010/11 (3)	Projected Loss Funds 2011/12 (4)
(A)	Fire Department	\$1,856,385	\$1,882,509	\$1,891,623
(B)	Parks and Recreation	361,067	366,148	367,921
(C)	Police Services Agency	9,176,223	9,305,357	9,350,405
(D)	Public Works	2,563,412	2,599,486	2,612,070
(E)	Other	3,004,587	3,046,869	3,061,619
(F)	Total	\$16,961,674	\$17,200,369	\$17,283,638

Note: (2) is from Exhibit LI-32.

(3) is from Exhibit LI-33.

(4) is from Exhibit LI-34.

We have shown the funding needs based on expected payments in 2009/10 through 2011/12. Outside legal expenses are included. Other costs including excess insurance, claims adjusting, and other administrative expenses are not included.

There are two primary goals of the cost allocation plan (the Plan):

- 1. To allocate and budget funds sufficient to cover the City's risk funding needs.
- 2. To charge loss funds in an equitable way that rewards departments with better-than-expected loss experience and provides incentives for all departments to improve risk management practices.

The Plan accomplishes this by looking at five years of exposures (i.e., payroll) in Exhibit LI-27 (page 64) and five years of incurred losses in Exhibit LI-28 (page 65). One would expect a department with 5% of exposures to have 5% of losses. Relative loss rates are

calculated in Exhibits LI-29 and LI-30 (pages 66 and 67, respectively) to demonstrate department departure from this expectation.

Next, the Plan compares each department's experience to the overall City average. Experience modification factors (Xmods) are calculated in Exhibit LI-31 (page 68) to measure department departure from the average.

In Exhibit LI-32 (page 69), each department's Xmod is applied to its current exposure to generate a "weighted exposure," share of weighted exposure to be applied to the City's project funding needs for 2009/10. A similar calculation is performed in Exhibits LI-33 ad LI-34 (pages 70 and 71, respectively) for 2010/11 and 2011/12, respectively.

The exhibits are described in greater detail below.

- 1. **LI-27** shows **Payroll** for the five-year period 2004/05 through 2008/09 and calculates each department's percent of payroll.
- 2. **LI-28** shows **Unlimited Losses** for 2004/05 through 2008/09 and calculates each department's percent of losses.
- 3. **LI-29** calculates **Relative Loss Rates** for each of the five years from 2004/05 through 2008/09. The percent of losses divided by the percent of payroll is the relative loss rate.

A relative loss rate greater than 1.000 means the department has proportionally more capped losses than payroll. This indicates relatively poor loss experience. A relative loss rate less than 1.000 indicates relatively good experience.

- 4. **LI-30** calculates an **Average Relative Loss Rate** for years 2004/05 through 2008/09. A five-year average provides stability and mitigates the effects of one bad year a department may have experienced.
- 5. **LI-31** calculates an **Experience Modification** factor (**Xmod**) for each department. This is a measure of whether a department's loss experience is better or worse than the City's average.

The "Weight" column shows the weight given to each department's own loss experience. If little weight is given to a department's own loss experience:

- Its experience modification will be close to 1.000, regardless of how good or bad its loss experience.
- Its share of total costs will be close to its share of payroll, regardless of how good or bad its loss experience.

If a lot of weight is given to a department's own loss experience, its experience modification factor will be able to move away from 1.000.

For most organizations, smaller departments do not want costs to fluctuate much from year to year, and individual loss experience is not a good predictor of long-term trends. For this reason, little weight is given to the loss experience of smaller departments. The opposite is true for large departments.

The minimum weight is 10%. A minimum weight was assigned, so even a small department would be given some credit for its own loss experience. The largest department is assigned a weight of 75%.

- 8. LI-32 calculates each department's recommended funding ("Projected Loss Funds") for 2009/10. A department's final loss funds is obtained by:
  - a. Calculating each department's "experience weighted exposure" for the year in which costs are to be allocated. Experience weighted exposure is payroll for the year multiplied by the Xmod calculated in Exhibit LI-31.
  - b. Calculating each department's percent of experience weighted exposure.
  - c. Multiplying the total funding needs by each department's percentage of experience weighted exposure.
- 9. LI-33 and LI-34 calculates each department's recommended funding ("Projected Loss Funds") for 2010/11 and 2011/12, respectively, in a manner consistent with that used in Exhibit LI-32.

The following points are of importance.

- 1. **Equity.** The proposed rating plan is an equitable way to determine each 'department's loss funds. It recognizes each department's exposure to loss and actual loss experience.
- 2. **Experience period.** We have used five years of loss experience. This is long enough to smooth the results of a single year (good or bad).

## 6. Analysis by Department and Cause of Loss

The frequency, severity, and loss rate by City department is summarized in Table III-6A. Further analysis by department by year is provided in Exhibit LI-24.

Table III-6A Analysis by Department 2004/05 through 2008/09

,	Department (1)	Number of Claims per \$1 Million of Payroll (2)	Average Cost per Claim (3)	Rate per \$100 of Payroll (4)
(A)	Fire Department	0.28	\$33,616	\$0.93
(B)	Parks and Recreation	0.83	10,727	0.89
(C)	Police Services Agency	1.83	20,782	3.81
(D)	Public Works	7.54	8,700	6.56
(E)	Other	0.88	19,721	1.73
(F)	Total	1.99	\$14,644	\$2.92

Note: (A) through (F) are from Exhibit LI-24.

Exhibit LI-25 shows the cumulative payments as of June 30, 2009 by department for the latest seven claim periods from 1999/00 to 2008/09. Table III-6B shows the summary.

Table III-6B
Payments by Department
1999/00 through 2008/09 as of June 30, 2009

	Department (1)	Total Paid (2)
(A)	Fire Department	\$3,988,518
(B)	Parks and Recreation	1,712,510
(C)	Police Services Agency	38,570,535
(D)	Public Works	21,894,725
(E)	Other	12,674,763
(F)	Total	\$78,841,051

Note: (A) through (F) are from Exhibit L1-25.

Exhibit LI-26 shows the top three categories of loss by frequency and average payment. This is shown by department and represents the combined loss experience from 2004/05 through 2008/09 valued as of June 30, 2009.

## 7. Affirm GASB Statement No. 10

We affirm the conclusions of this report are consistent with GASB Statement No. 10.

# Appendix A Conditions and Limitations

## **Conditions and Limitations**

It is important to understand the conditions and limitations listed below. Each chapter and section is an integral part of the whole study. If there are questions, please contact ARM Tech for clarification.

- **Data Quality.** We relied upon data provided by the organization shown on the transmittal page or its designated agents. The data was used without verification or audit, other than checks for reasonableness. Unless otherwise stated, we assumed the data to be correct and complete.
- **Economic Environment.** Unless otherwise stated, we assumed the current economic conditions will continue in the foreseeable future.
- **Insurance Coverage.** Unless otherwise stated, we assumed no insurance coverage changes (including coverage provided by the organization to others) subsequent to the date this study was prepared. This includes coverage language, self-insured retention, limitations and similar issues.
- **Insurance Solvency.** Unless otherwise stated, we assumed all insurance purchased by the organization is from solvent sources payable in accordance with terms of the coverage document.
- Interest Rate. The exhibits specify the annual interest rate used.
- **Methodology.** In this study, different actuarial methods were applied. In some instances, the methods yield significantly disparate results. The estimates, projections and recommendations in this study reflect our judgments as to the best method or combination of methods that are most reliable and reflective of the exposure to loss.
- Reproduction. This study may only be reproduced in its entirety.
- Risk and Variability. Insurance is an inherently risky enterprise. Actual losses may vary significantly from our estimates, projections and recommendations. They may emerge higher or lower.

- Statutory and Judicial Changes. Legislatures and judiciaries may change statutes that govern indemnification. This includes benefit levels for workers compensation, immunities and limitations for liability, and other similar issues. Unless otherwise stated, we assumed no statutory changes subsequent to the date this study was prepared.
- **Supplemental Data.** In addition to the data provided by the organization, we supplemented our analysis with data from similar organizations and insurance industry statistics, as we deemed appropriate.
- **Usage.** This study has been prepared for the usage of the organization shown on the transmittal page. It was not prepared for and may not be appropriate for use by other organizations. Other organizations should obtain written permission from ARM Tech prior to use of this study.

# Appendix B Glossary of Actuarial Terms

## **Glossary of Actuarial Terms**

#### **Actuarial Methods (Most Common)**

A major objective of an actuarial study is to statistically project ultimate losses. The following actuarial methods are the most common:

- Developed Paid Losses
- Developed Reported Incurred Losses
- Developed Case Reserves
- Frequency Times Severity Analysis
- Loss Rate Analysis

The following describes each method:

1. **Developed Paid Losses.** Paid losses represent the amounts actually paid to claimants (less excess insurance recoveries). As time goes on, loss payments continue until all claims are closed and there are no remaining payments expected. At this time, the ultimate losses for the claim period are known. This common process is called "paid loss development."

Paid loss development is an extrapolation of actual dollars paid. It does not depend on case reserve estimates. A potential shortcoming of utilizing this method is that only a small fraction of total payments have been made for the most recent claim periods. Extrapolating ultimate losses based on small amounts of actual payments may be speculative. A second potential shortcoming is that payment patterns can change over time.

2. Developed Reported Incurred Losses. Reported incurred losses are paid losses plus case reserves. In most programs, total reported incurred losses underestimate the ultimate losses. Over time, as more information about a body of claims becomes known, they are adjusted either up or down until they are closed. Though many individual claims settle for less than what was estimated, these decreases are generally more than offset by increases in the cost of other claims for which new information has emerged.

The net effect is that total estimated costs are often revised upward over time. This normal process is called "reported incurred loss development." Actuaries typically

- review the development patterns of the recent past to make projections of the expected future loss development and, therefore, estimations of ultimate losses.
- 3. **Developed Case Reserves.** The developed case reserves method is a hybrid of the paid loss development and reported incurred loss development methods. It relies on the historical adequacy of case reserves to predict ultimate losses.
- 4. **Frequency Times Severity Analysis.** The frequency times severity analysis is an actuarial method that uses a preliminary projection of ultimate losses to project claims severity. The claims severity times the number of claims is a predictor of ultimate losses. The focus of the frequency times severity analysis is that ultimate losses each period are dependent on the number of claims.
- 5. **Loss Rate Analysis.** The loss rate analysis is based on the historical loss rates per exposure unit (such as payroll, vehicles or property value). The loss rates (projected ultimate losses divided by exposure units) are trended to reflect the effect of claim cost inflation and retention changes. The trended loss rates represent the rates that one would see if all of the claims had been handled in the claim cost environment that will be present in the upcoming period. The trended loss rate times the projected exposure units is a predictor of losses.
- 6. **Bornhuetter-Ferguson Method (B-F).** The B-F method is an actuarial method that weights a preliminary projection of ultimate losses with projections of ultimate losses determined by other actuarial methods (usually the developed paid losses and developed reported incurred losses methods). For less mature claim periods, the B-F method leans more heavily to the preliminary projection. It gradually converges to the projections of ultimate losses determined by the other actuarial methods as the claim periods mature.

## Actuary

A specialist trained in mathematics, statistics, and finance who is responsible for rate, reserve, and dividend calculations and other statistical studies.

## **Allocated Loss Adjustment Expenses**

Allocated loss adjustment expenses (ALAE) are the direct expenses to settle specific claims. These expenses are primarily legal expenses.

Governmental Accounting Standards Board (GASB) Statement No. 10 requires that ALAE be included in financial statements and that they be calculated by actuarial methods.

### **American Academy of Actuaries**

A society concerned with the development of education in the field of actuarial science and with the enhancement of standards in the actuarial field. Members may use the designation MAAA (Member, American Academy of Actuaries).

#### **Benefits**

The financial reimbursement and other services provided insureds by insurers under the terms of an insurance contract. An example would be the benefits listed under a life or health insurance policy or benefits as prescribed by a workers compensation law.

### **Casualty Actuarial Society**

A professional society for actuaries in areas of property and casualty insurance work. This society grants the designation of Associate of the Casualty Actuarial Society (ACAS) and Fellow of the Casualty Actuarial Society (FCAS).

#### Claim

Demand by an individual or entity to recover for a loss.

#### Claims Made

A policy written on this basis covers only those claims that are made during the policy period. Coverage for prior acts is provided back to what is known as the retroactive date, which is the effective date of the original claims made policy with the same insurer.

## **Composite Rate**

A single rate with a single basis of premium (e.g., payroll or sales). For this single rate the insured is covered for a variety of hazards, such as premises and operations, completed operations, products liability, and automobile. Its primary value is to compute premium simply.

#### Confidence Level

A confidence level is the statistical certainty that an actuary believes funding will be sufficient. For example, an 80% confidence level means that the actuary believes funding will be sufficient in eight years out of ten.

Confidence levels are determined based on mathematical models. Coverages that are low frequency and high severity (such as excess liability) are subject to greater risk than coverages that are high frequency and low severity (such as automobile physical damage). Therefore, they need a greater margin to attain a given confidence level.

GASB Statement No. 10 requires public entities to use "expected" amounts as a liability in financial statements. Expected corresponds to approximately a 55% confidence level. Amounts above expected are prudent, but should be considered equity (not a liability).

#### Coverage

The scope of the protection provided under a contract of insurance.

### Credibility

Credibility is the belief that the sample data is an accurate reflection of the larger population. Credibility is highest when the sample data is large and the standard deviation (discussed later) of the larger population is low.

#### **Dates**

There are at least three milestone dates in a claim. They are the date of injury or accident, the date of report and the date of closure. It is best if each of these dates is recorded. Some organizations may also keep the date a claim becomes a lawsuit, as opposed to a demand. ARM Tech recommends this additional level of detail, especially if the data is to be used for litigation management.

#### Deductible

The portion of an insured loss to be borne by the insured before he is entitled to recovery from the insurer. Deductibles may be expressed as a dollar amount, percentage or waiting period.

#### Disability

A condition that curtails a person's ability to carry on his normal pursuits. A disability may be partial or total, and temporary or permanent.

### Dividend (Policyholder)

The return of part of the premium paid for a policy issued on a participating basis by either a mutual or a stock insurer.

### **Estimated Outstanding Losses**

Estimated outstanding losses are the cost of claims that have occurred but have not yet been paid. They typically include indemnification and allocated loss adjustment expenses (ALAE), but not unallocated loss adjustment expenses (ULAE).

Estimated outstanding losses are calculated as projected ultimate losses less paid losses. Alternatively, they are the sum of case reserves and incurred but not reported (IBNR) claims.

Estimated outstanding losses are usually the largest single item listed as a liability on the balance sheet of a public entity's financial statement. GASB Statement No. 10 requires they be calculated by actuarial methods. Other common names for estimated outstanding losses are outstanding claims liabilities and unpaid claims.

## **Experience Rating**

A method of adjusting the premium for a risk based on past loss experience for that risk compared to loss experience for an average risk.

## **Exposure Data**

Exposure data refers to the activities of the organization. For example, payroll is the most common exposure measure for workers compensation. ARM Tech suggests collecting exposure data with the following characteristics:

**Readily Available.** The exposure data should be easily obtained. It is best if it is a byproduct of other activities, although this is not always possible. If getting data is arduous, it may discourage collection.

Vary With Losses. The exposure data should correlate directly with losses. The ideal situation is where exposure and expected losses move in tandem. The exposure base needs to be fitting to the coverage. For example, the number of employees may vary with property losses (more employees = more office space = more losses), but property value is a clearly superior exposure base for property losses.

### **Generally Accepted Accounting Principles (GAAP)**

These principles are intended to produce financial results (in the insurance industry) consistent with those of other industries and to assure consistency in financial reporting.

#### **Incurred But Not Reported**

IBNR is really comprised of two distinct items. These are the development of known case reserves (incurred but not enough reported [IBNER] and incurred but not yet reported [IBNYR]).

IBNER are the actuary's estimate of the inadequacy of case reserves. Most claims settle at amounts close to what is set by the claims administrator. Some claims close favorably and some emerge as more expensive. On balance, case reserves tend to be too low (especially for recent years). IBNER is the actuary's estimate of the amount total case reserves will rise upon closure.

IBNYR refers to those claims that have occurred, but have not yet been reported. A classic example is medical malpractice claim reported several years after the medical procedure was performed.

## Insurance Services Office (ISO)

An organization of the property and casualty insurance business designed to gather statistics, promulgate rates, and develop policy forms.

#### Investment Income

The return received by entities from their investment portfolios, including interest, dividends and realized capital gains on stocks. Realized capital gains means the profit realized on assets that have actually been sold for more their purchase price.

#### Limited

Most programs purchase excess insurance for catastrophic claims. For example, they may purchase coverage for claims above a \$500,000 per occurrence self-insured retention. "Limited" refers to an estimate or projection being limited to the self-insured retention. In contrast, "unlimited" means a loss projection not limited to the self-insured retention.

Other common names for limited are net of excess insurance or capped losses.

### **Loss Development**

The difference between the amount of losses initially estimated by the insurer and the amount reported in an evaluation on a later date. Loss development is typically measured for paid losses, reported incurred losses and claim counts.

#### Manual Rates

Usually, the published rate for some unit of insurance. An example is in the workers compensation manual, where the rates shown apply to each \$100 of the payroll of the insured, \$100 being the "unit."

### **National Council on Compensation Insurance (NCCI)**

An association of workers compensation insurance companies whose main functions are collecting statistics and calculating rates, establishing policy wording, developing experience and retrospective rating plans, and serving as the filing organization for member companies.

#### Net

Many pooling programs assign deductibles to members. For example, each member may have a \$5,000 per claim deductible. "Net" refers to a loss estimate or projection that excludes amounts below member deductibles.

#### Occurrence

An event that results in an insured loss. In some lines of insurance, such as general liability, it is distinguished from accident in that the loss does not have to be sudden and fortuitous and can result from continuous or repeated exposure that results in bodily injury or property damage neither expected nor intended by the insured.

#### Pool

An organization of entities through which particular types of risks are written with the premiums, losses, and expenses shared in agreed amounts among the members belonging to the organization.

#### **Premium**

The price of insurance protection for a specified risk for a specified period of time.

#### **Present Value**

The amount of money that future amounts receivable are currently worth. For example, a Life Insurance policy may provide for payments to be made monthly for ten years. The present value of that money would be less than the total amount of the regular periodic payments for 10 years because of the amount of interest that a present lump sum could earn during the term than the payments otherwise would have been made.

## **Probability**

The probability is the likelihood of an event. It is a measure of how likely a value or event is to occur. It can be measured from data by calculating the number of occurrences of the value or event divided by the total number of occurrences. This calculation can be converted to a percentage. For example, tossing a coin has a 50% probability of heads or tails.

## **Projected Losses Paid**

Projected losses paid are the projected claims disbursements in a period, regardless of when the claim occurred. They typically include indemnification and ALAE, but not unallocated loss adjustment expenses (ULAE).

"Projected losses paid" is a cash-flow analysis that can be used in making investment decisions.

## **Projected Ultimate Losses**

Projected ultimate losses are the accrual value of claims. They are the total amount that is expected to be paid in a particular claim period after all claims are closed. Projected ultimate

losses are the total loss costs for a particular period. They typically include indemnification and ALAE, but not ULAE.

Other common names for projected ultimate losses are expected losses, ultimate losses and total losses.

#### Rate

The cost of a given unit of insurance. For example, in life insurance, it is the price of \$1,000 of the face amount. In property insurance, it is the rate per \$100 of value to be insured. The premium is the rate multiplied by the number of units of insurance purchased.

#### Retrospective Rating

A method for which the final premium is not determined until the end of the coverage period, and is based on the insured's own loss experience for that same period. It is usually subject to a maximum and minimum premium. A plan of this type can be used in various types of insurance, especially workers compensation and liability, and is usually elected by only very large insureds.

### Salvage

Property taken over by an entity to reduce its loss. Automobile physical damage losses can be reduced by the sale of recovered vehicles.

## **Schedule Rating**

The application of debits or credits within established ranges for various characteristics of a risk according to an established schedule of items. Under liability and automobile insurance, the schedule rating plan allows credits and debits for various good or bad features of a particular commercial risk. An example in automobile schedule rating would be allowing credits for driver training classes or fleet maintenance programs.

## Self-Insurance Retention (SIR)

That portion of a risk or potential loss assumed by an insured. It is often in the form of a per occurrence deductible.

## Society of Actuaries (SOA)

A professional society for actuaries in areas of pensions, and life and health insurance work. The SOA grants the designation Associate of the Society of Actuaries (ASA) and Fellow of the Society of Actuaries (FSA).

## Standard Premium

Most often used in connection with retrospective rating for Workers Compensation and General Liability Insurance. It is the premium of which the basic premium is a percentage and is developed by applying the regular rates to an insured's payroll.

## State Fund

A fund set up by a state government to finance a mandatory insurance system, such as Workers Compensation or non-occupational disability benefits. Such a fund may be monopolistic, i.e., purchasers of the type of insurance required must place it in the state fund; or it may be competitive, i.e., an alternative to private insurance if the purchaser desires to use it.

## Statutory Accounting Principles (SAP)

Those principles required by statute that must be followed by an insurance company or other similar entity when submitting its financial statement to the state insurance department. Such principles differ from (GAAP) in some important respects. For one thing SAP requires that expenses must be recorded immediately and cannot be deferred to track with premiums as they are earned and taken into revenue.

## **Unallocated Loss Adjustment Expenses**

Unallocated loss adjustment expenses (ULAE) are the indirect expenses to settle claims. These expenses are primarily administration and claims handling expenses.

GASB Statement No. 10 requires that ULAE be included in financial statements and that they be calculated by actuarial methods.

Appendix C

Exhibits

## **Exhibits**

The attached exhibits detail our analysis.

Data Summary as of June 30, 2009

Claim Period (1)	Specific Self-Insured Retention (2)	Aggregate Retention (3)	Months of Development 6/30/09 (4)	Payroll (000) (5)	Reported Claims 6/30/09 (6)	Open Claims 6/30/09 (7)	Limited Paid Losses 6/30/09 (8)	Limited Case Reserves 6/30/09 (9)	Limited Reported Incurred Losses 6/30/09 (10)

I, II, and III were provided by the City. Payroll by department for 2005/06 and 2006/07 was estimated based on the percent distribution of 2004/05 payroll.

Claim counts and loss amounts are on a reported basis. They have not been developed to ultimate values. Losses are net of specific self insured retention.
